ANAHEIM, CALIFORNIA, THURSDAY, MAY 11, 1905

NUMBER 29

SOMEBODY LIES, SAYS HALE; SAYS PORTER, ISN'T ME

Sherwood's Claim That He Was Ignored
In the Pipe Matter, and What
Came of It

Anaheim, Cal., May 6, 1905.

Regular meeting Board of Directors Anaheim Union Water Co., with following present: Directors Crowther, Bradford, Hale, Kraemer, Sherwood, McDermont and Zeyn. Minutes of preceding meeting of April 15th read and approved.

Bradford of ditch committee reported that Company can not put in Witter ditch until rights of way are given by Holcomb and Drake. Committee also reported Mrs. des Granges willing to assist in same manner as Mr. Chapman has done, provided Company will replace with pipe remainder of ditch along her east line. Laid on table. Committee reported C. S. Miles claimed our ditch has done him serious damage by turning waste water onto his land and asks that ditch be replaced by pipe line. But Vosburgh demands that ditch be left as it is and threatens suit in case of change. There is also a dispute as to ownership of the land. Mr. Miles requests that some definite action be taken at once. On motion of Sherwood, seconded by Zeyn, report of ditch committee as regards Miles ditch was laid on table.

Bradford reported that on Friday morning contractor had begun boring his first well for the company. It was reported to the Board that Superintendent of Santa Ana Valley Co. says the wells are being bored on the Hazen tract which belongs to that company. The matter was discussed but Board remained of the opinion that the work is being done on our own land. Moved by Zeyn, seconded by Hale, that the pumping plant committee employ the County Surveyor to locate the corners of the Cotá Tract. Carried.

Report of Finance committee was accepted and filed and warrants ordered drawn in payment of the various amounts as therein recommended. Secretary's report was received and filed. Reports of Treasurer and Superintendent received and filed. A communication was received from Mrs. Mary Hunter, asking the privilege of purchasing ten barrels of cement for a ditch on her ranch. Granted. A communication from W. E. Bedley of Riverside presented proposed articles of incorporation and by-laws of the Santa Ana River Association and asked that any desired changes be suggested. It was also explained to the Board that the S. A. V. I. Co. desires that a joint meeting of the two Boards be held for the consideration of the matter. On motion Board appointed a joint meeting to be held at 2 p. m. on Tuesday, May 16, and secretary was instructed to so notify the S. A. V. I. Co. Board and also to state that this Board does not think it necessary to have Eng. Koebig present. A communication from the Santa Fe Ry. Co. in regard to the construction of a crossing near Kossert's place was referred to the superintendent for answer. A communication from First National Bank of Fullerton asked the payment of a note for \$5000. On motion president and secretary were authorized to draw a warrant in favor of the bank in payment of the note, and also to borrow money for that purpose if necessary. The matter of payment of note of E. Barr and of securing a loan from Mrs. A. E. Susmilt was left with the president and secretary with power.

A communication was received from the engineer of the Riverside Water Company, asking that he be furnished with a map of the district irrigated by the A. U. W. Co. The communication was referred to the secretary with instructions to answer that we have no such map to spare, but that he is welcome to come to the office of the company and take a copy of our map. A communication from the So. Pacific Ry. Co. refusing to assist in the construction of a ditch on pipe line along Santa Ana street, was received and filed. A communication from J. S. Chapman, relating to the sluicing on the Bixby property was referred to Attorney Melrose to answer. A communication from J. Kruger, asking that he be furnished with a more satis-

factory means of getting water, was referred to Zeyn to report at next meeting.

Applications on file for the transfer of stock were granted by the Board.

Moved by Hale, seconded by Kraemer, resolved that a committee of three be appointed by the Board to employ an engineer to investigate the cost of so increasing the capacity of the Tuffree Reservoir as to make it contain also the Anaheim night water, or to find the cost of the construction of any other reservoir for that purpose. Carried. The following committee was appointed for that purpose: Hale, Kraemer and Zeyn.

Moved by McDermont, seconded by Kraemer, resolved, that an assessment of two dollars per share be and the same is hereby levied upon the capital stock of the corporation, payable on or before June 10th, 1905, to the secretary of the corporation, at the office of the corporation in the Backs building, Los Angeles street, Anaheim, Cal. Any stock upon which this assessment shall remain unpaid on the 11th day of June, 1905, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on Friday, the 30th day of June, 1905, to pay delinquent assessment, together with costs of advertising and expenses of sale. Motion adopted.

President Crowther asked leave of absence on account of a contemplated trip to Europe. On motion of Hale, seconded by Bradford, leave of absence was granted to Crowther as requested. Crowther then asked that someone be placed on the Committee of Management of the Durkee ranch in his place. On motion of Hale, McDermont was appointed to that position.

Hale asked permission to bring up a matter of personal privilege. It was granted. He then asked the superintendent whether Sherwood had been ignored or not consulted in the matter of the laying of the pipe on the east line of the des Granges property.

Supt. Porter answered that Sherwood was the first man with whom he had talked about the matter and that Sherwood had called him up by phone and wanted to know by what authority he had torn out the ditch and said that it would have to be put back as it was before. Porter then called up the other members of the board and asked their judgment in the matter. They were unanimous in the opinion that inasmuch as the ditch had been already torn out through a misunderstanding the only practical thing left to be done was to go ahead and put in the pipe.

It appearing from the statements of the superintendent that a consultation had been had with Sherwood and that he had given it as his opinion that the ditch must be restored to its original condition, Hale then stated that if Sherwood contends that he was not consulted in the matter then somebody lies.

[Porter (sotto voce)—It was not me!—Ed.]

There being no further business the meeting adjourned. P. H. KRICK, Secretary.

United States National Bank

Chester Holcomb returned on Friday from Thermal, after an absence of a fortnight, during which time he awaited the coming of I. W. Hellman from San Francisco to Los Angeles for the purpose of conferring with him relative to becoming interested in the new bank to be started here. Mr. Holcomb had an interview with Mr. Hellman at the Farmers and Merchants' bank on Thursday, and the latter agreed to become the largest stockholder in the enterprise. Mr. Hellman suggested the new bank be changed to a national bank, which suggested was approved, the new name being the United States National Bank. The name was suggested by Mr. Hellman.

Application for a charter was at once forwarded to the Comptroller of the Currency at Washington, and as soon as the papers arrive, which will probably be within a fortnight, a meeting of stockholders will be called, directors and officers chosen and a site selected.

J. A. Graves, Vice President of the Farmers and Merchants' bank of Los Angeles, will probably be president of the new institution.

Mr. Holcomb will be cashier, and Otto Strothoff will have a position in the bank.

Mr. Strothoff on Saturday held a conference with Senator W. A. Clark in Los Angeles, as a result of which

Mr. Clark consented to become a stockholder and a director in the new bank.

Senator Clark has been anxious for Strothoff's return to Jerome since the latter resigned his position as head bookkeeper after an engagement of fourteen years, and has made several flattering offers looking to his return. These have been declined, for the reason that Strothoff desires to go into business for himself. The two are warm friends, and when Strothoff talked bank to Clark the latter agreed to become associated with the enterprise.

Holcomb returned to Thermal on Tuesday. He was accompanied by his sister-in-law, Miss Dora Zeyn, and his young son, who has been visiting with relatives here for some weeks past. He will be back next week prepared to take final steps in the organization of the new bank.

Holcomb is engaged in getting ready his melon crop for shipment east. There are 1000 acres in melons at Thermal, Coachella and other points close by. The yield will amount to 300 cars. The eastern market is particularly flattering for these early melons, which are the first in the market from any section in the United States. Florida is a weak competitor. While Florida melons sell for \$1.25 per crate, California melons bring \$5, the difference being due to superior quality.

The new bank will have a savings department in which interest will be paid on all forms of time deposits. The savings department will be run in connection with the largest savings bank in Southern California. It has been the purpose of the organizers of the new institution to make it as solid and substantial a financial institution as it is possible to do.

C. E. Holcomb and Otto W. Strothoff will have the management of the bank.

Chamber of Commerce

The subscription lists asking for donations for the purchase of a site for the laboratory were read at the meeting of directors of the chamber of commerce on Thursday evening. Citizens have signed liberally, the amount then being in the neighborhood of \$534. The committees have been actively engaged since then and the full amount desired will be raised. The selection of a site will shortly be made. Among the powers that be south of Tehachapi it is given out that the new state farm goes to Riverside county and the laboratory will be located in Orange county—Los Angeles not having a finger in the pie. And as Anaheim is the only town in Orange after the station we surely are in the lead. Good.

The telephone committee has performed a laudable task for this city in securing the 100 additional subscribers necessary to insure the installing of a 24-hour telephone service. The new subscribers are from the Magnolia district, with other fields yet to conquer. This territory is tributary to Anaheim and will place the people in closer touch from a business standpoint.

The committee on public improvements gave traveling vendors and fake doctors a hard whack over the knuckles. These itinerant travelers work a great hardship upon the resident merchants who are the mainstays of the town. These wandering peddlers must be kept out. A high license is what will fix them. The matter is to be passed up to the city fathers for remedying.

Speaking of quack doctors and such like a member of the chamber volunteered the remark that he knows a man who bought \$30 worth of "medicine" and after taking a small part of it, he placed the rest in the woodshed (not having anything against the woodshed, however), and felt this latter act did him the most good. This is no joking matter. A prohibitive license should be imposed upon these faking people.

Committee on Membership Grim reported the following new members: Miss Hershman and Messrs. Talcott, Hartfield and Spoerl.

California Promotion Committee wrote for some nice photos of prominent views hereabout, the same to be used in an eastern publication.

Invitation from F. W. Blanchard of the Broadway Boulevard committee of Los Angeles asking chamber to attend the lighting function May 6. Filed.

Manager F. W. West of the Sunset addressed a letter saying complaint had been made to his office that Herr Kohlenberger was working the cham-

ber's telephone overtime with his private business. The phone it is understood is for the use of the chamber of commerce and its service ends there. It appears there is someone camping of Herr Kohlenberger's trail and wants his scalp. Some time since complaint was made charging Kohlenberger with accosting tenderfeet who chanced to drop into the exhibit rooms and forthwith to ply his wares, offering bargains in his several lines. Kohlenberger said he thinks he knows his phantom pursuer but would not divulge his name in open meeting. So the president appointed Directors Dr. Adams, Wallop and Michod a committee to probe the teapot tempest and report.

Application of Mr. Royer for payment of \$15 for full-page writup and a nice bird's eye view of this city in our esteemed contemporary was temporarily held up. The edition had not as yet been printed—it being issued two days later—and the directors therefore did not care to o.k. the demand. It was stated by Mr. Kohlenberger, he speaking for Mr. Royer—the latter gentleman having earlier in the day authorized him to so inform the directors—that the boom edition of 500 extra copies were to be mailed at Redondo along with a similar number of copies of a writup of that seaport town. The spokesman further said that should the directors incline to be skeptical concerning this procedure he (Mr. Royer) would bring both editions here ready for mailing and then re-ship them to Los Angeles and mail them from that point.

"Why not save this extra trouble and mail the papers here?" inquired Director Wallop.

"And what guarantee have we that the edition will be mailed in Los Angeles?" asked Director Grim.

The spokesman was unprepared to answer either question.

The matter after further discussion was left to Director Dr. Adams of the special printing committee to investigate and report at next meeting.

Several communications of more or less interest were received. There were present Directors Ahlborn, Wallop, Michod, Grim, Dr. Adams.

Beneficial Bacteria for Leguminous Crops

The part which leguminous crops play in maintaining soil fertility has long been a matter of speculation among practical farmers and a subject for critical investigation on the part of scientific men. Plants of this family, the leguminosae (which in general bear their seeds in a pod or legume), when grown in contact with certain bacteria form upon their roots small knots or nodules variously known as "nitrogen knots" or "nitrogen traps" from the part they play in furnishing to the plants nitrogen derived from the air.

Ever since anything has been known in regard to plant nutrition and the necessary part that various gases and minerals play in the successful growing of crops, scientific men have realized the great importance of conserving the world's store of nitrogen, and have made every effort either to husband or to increase all available sources of supply. In the early days, when it was first realized that nitrogen was so essential to plant life—in fact, was at the very foundation of agriculture—no particular alarm was felt. Botanists had demonstrated that plants obtained their carbon from the carbon dioxide of the air, and since this gas is present in so much less quantity than nitrogen it was believed that by no possible means could the most essential of plant foods be exhausted. However, when it was shown that plants were unable to use free atmospheric nitrogen and must obtain it directly from the soil in a highly organized form, the importance of the problem increased greatly, and the gravest consequences were predicted by those familiar with the rapidity with which this valuable element was being wasted.

From the earliest days of agriculture it has been recognized that all plants belonging to the leguminosae had a decidedly beneficial effect upon the soil. Pliny wrote: "The bean ranks first among the legumes. It fertilizes the ground in which it has been sown as well as any manure." And again: "The lupine enriches the soil of a field or vineyard as well as the very best manure. The vetch, too, enriches the soil and requires no attention in its

(Continued on Page Five)

Meeting of City Fathers

The city trustees met in regular session on Tuesday evening; present Rust, Darling, Fletcher, Schwencert.

Marshal Steadman reported the following collections for April: Water \$293.70, electric lights \$447.65, licenses \$519, total \$1260.35. Delinquents collected: Water \$39.55, lights \$12, total \$51.55. Delinquents reported: Water \$41.50, lights \$34.40, total \$75.90.

Treasurer Hartung reported the following funds in bank: General fund, \$1194.60; improvement fund No. 1 \$907.50; No. 2 \$157.50, No. 3 \$432, library \$245.92, total \$2937.52.

Recorder Howard reported two cases in his court during the month; fines collected \$5, fees \$6.

Fletcher of the finance committee reported the approval of bills against the city amounting to \$1486. Warrants were ordered drawn in payment therefor.

Committee on hitching rack was given further time.

Committee on bad condition of North Lemon street reported progress. Schwencert stated the thoroughfare could not be properly repaired until sand was hauled away and oil used.

Committee on cesspool in rear of city hall reported favorably upon offer of N. Hart to construct same jointly; cost to be \$3 per foot, cesspool to be 10 feet deep and bricked.

Application of F. J. Decker for permission to construct an L shaped frame building on the east and south side of Commercial hotel; denied. Decker will have to put up a brick building if he builds at all.

Application of J. D. Heitschusen and Adam Walter for saloon license, offering to erect a brick building therefor, pay for cost of amending liquor ordinance limiting saloons to present number, and to erect residences. Laid on table.

Communication from chamber of commerce objecting to granting said license. Filed.

Clerk Merritt reported that he had last month mailed a city warrant in the amount of \$39.15 to J. Wagner of Fullerton, and the latter had failed to receive it. A duplicate was ordered drawn, on Wagner's giving city indemnity bond.

Application of F. W. Fleischman for erection of a corrugated iron building east of Yungbluth & Kroeger for temporary occupancy as a meat market during construction of the new Odd Fellows' hall. Granted.

Petition of Mrs. Natalie Rimpau, L. Nemetz, Frank Eastman, Richard Krebs, Mr. Seale, Mr. Gebert and others, requesting that the contemplated cement sidewalk on the east side of Olive street and on the west side of that thoroughfare from Adele to Sycamore be deferred for the present. Filed.

M. Nebelung appeared before the board asking for Mrs. Susmilt the privilege of laying at her own expense a 1-inch water pipe tapping the main at Santa Fe depot and running 400 feet to site of a new residence she purposes constructing. She to have use of pipe until such time as cost was made up in water consumed, when pipe would revert to city.

The board were of opinion that if Mrs. Susmilt would increase the size of pipe to two inches, action favorable upon her request would be taken.

Fletcher said he had in contemplation the erection of several residences in the neighborhood and would at an early date request extension of water service in that direction.

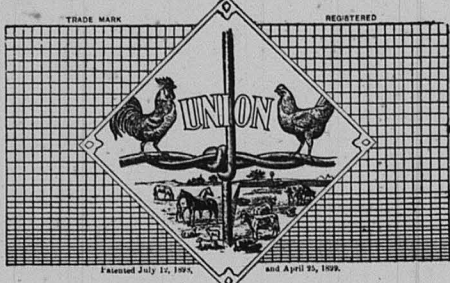

After discussion the board voted to grant Mrs. Susmilt's application, provided size of pipe be two inches.

James Eneal addressed the board relative to sidewalk around central schoolhouse. He stated the fence around the building was in need of repair, but that if a cement sidewalk would be constructed no new fence would be necessary.

The opinion of City Attorney Melrose being asked upon the subject, he said it was the duty of the school trustees to provide sidewalks around school property, but there was no law whereby the city trustees could compel them to do so.

After discussion the board put it up to the school trustees to provide necessary sidewalks around and about the school buildings.

Joseph Helmsen this week let a contract to O. Lagman for the erection of a \$2500 residence on his lot on Claudina street.

This is the easiest fence to put up
Is the prettiest fence when it is up
Stays up in good shape the longest
Just notice the LOCK, it stays

The Underground Waters of Southern California

[By W. C. Mendenhall, Geologist, Twelfth National Irrigation Congress, El Paso, Tex.]
(Continued from last week)

The geological relations which have made this condition possible may be briefly outlined. The valley of Southern California is not a normal stream valley, carved by stream action and adjusted in width, depth and alignment to the volume and course of the stream. It owes its character entirely to other agencies, those agencies being crustal movements. This diversified low land may be best described as a series of deep, irregular crustal troughs, parallel to each other and to the Pacific shore line, plunging to the northwest and abutting in this direction against the granitic San Gabriel range. At the foot of this range the ridges separating the troughs are lowest, and a practically continuous valley extends from Santa Monica to San Bernardino. Farther south the separating ridges rise higher, and the valley is broken by mountain chains and groups. As these troughs and their separating ridges have formed by geologic processes, the previously existing rivers have maintained their way across them from the higher mountains where they rise, to the sea, and in maintaining these courses have cut canyons in the ridges and have filled the troughs with the sands, gravels and clays that are due to their erosive action. The result is a series of deep bedrock valleys filled with alluvium, across which the rivers flow. These conditions give rise to certain peculiarities in the habits of the rivers, peculiarities which it happens adapt them in a wonderful way to man's needs as an irrigationist.

The Santa Ana river is the most important of these Southern California streams, has the largest drainage basin, the longest course and exhibits these beneficent peculiarities in the great perfection. It will therefore be briefly traced as an example of the type. It rises in the higher San Bernardino mountains where rainfall is abundant, and has attained a volume of from 25 to 50 second feet when it reaches the first of the filled geologic troughs at the mouth of its upper canyon. Here it promptly sinks in the coarse debris and percolates slowly below the surface, protected perfectly from evaporation and contamination until it reaches the lowest point in the rim of this depression. This rim forces it to the surface, and it flows across it as a living stream, the waters which escape diversion sinking again in the gravel filling of the second trough. After a short subterranean course it is forced out again by the impervious rock at Riverside Narrows, and continues to flow over the surface through the Santa Ana mountains until beyond these it reaches the inner edge of the greatest of the troughs, the Coastal Plain, in which it sinks. Below Santa Ana it rises once more in a series of strong scattered springs and escapes to the sea.

This hide and seek habit is characteristic of the rivers of this valley, and is as ideal an adaptation to the needs of the arid land horticulturist as though definitely planned by man for his own benefit. The lower rims of the rock folds force the water to the surface at very convenient intervals for diversion, and meanwhile not only is the water in its underground passage saved from loss by evaporation, but the irregular spasmodic supply at the canyon mouths is converted into a uniform flow which is unaffected by individual storms and responds but slowly to prolonged wet or dry periods. These basins are, therefore, not only storage reservoirs, but are most effective regulators as well, and go far to bring about that most important desideratum in irrigation practice, uniformity of supply. An additional important economic factor is introduced by the presence of artesian conditions along the lower margin of each of these storage basins.

The material with which the rock basins are filled is alluvium, river deposited sediment. Each stream issuing from its mountain canyon carries with it the products of its

erosional activity there. Debouching upon the plain, its velocity is checked and the heavier fragments are dropped. At the lower margin of any particular basin, where the velocity of flow is least, the finest materials are laid down as clay sheets. These have the original slope of the stream bed and are limited in their extent upstream. In this direction they gradually become coarser until they are no longer impervious. The waters entering the valley at the canyon mouths and percolating seaward below the surface through the more porous strata are entrapped beneath these sloping clay blankets, where, under the weight of the waters behind them, they accumulate pressure. Then when the impervious clay cap above them is pierced they flow.

These cheap artesian waters are well distributed in Southern California, and have been important elements in its development. The original area of the lands under which they were found was about 375 square miles, but it has suffered a shrinkage of 33 per cent during the last fifteen years and now measures only about 250 square miles.

Since these artesian basins are unlike the normal synclinal folds in porous rock which have come to be regarded as the type, so they have special characteristics which bear directly upon their usefulness.

In the first place, being in wholly unconsolidated and generally coarse material, they have a high transmission capacity. So freely does the water flow through them that individual ten-inch wells have in a few cases yielded six or eight second feet of water. Such wells do not fail because the water supplied at the head of the alluvial fan can not reach the boring, as has been the case in the Denver basin, for example. On the other hand, flowing so freely they draw down the supply at a very rapid rate, but can be restored if closed for a time, while a new supply is allowed to accumulate.

The fact that the water bearing strata lie approximately parallel to the surface, and that the highest are very near it, facilitates development to such an extent that ranchers in many instances have found it more economical to sink a well for each ten acre lot than to distribute from a single central well. This condition encourages the multiplication of wells and the draughts upon the artesian supply.

It is these great rock basins, with their filling of saturated alluvial wash which constitute the important underground reservoirs that have not only tided the region over a long period of low rainfall, but have actually made possible constant additions during the dry per-

iod to the reclaimed lands. These great natural reservoirs more than compensate for the lack of sites for effective artificial storage. Their actual capacity is to be expressed in cubic miles rather than in smaller units. The San Bernardino basin has been explored by the auger for over 1000 feet, and is roughly estimated to attain a maximum depth of 3000 or 4000 feet. The alluvial filling about Pomona and Chigo, and that east of Pasadena, above the Paso de Bartolo, is known to extend below sea level. The great Coastal Plain basin has been explored for 1300 feet, and its depth, were it known, would probably be found to run well up into the thousands. With a surface area of 775 square miles and on the basis of 30 per cent of voids, a very impressive but utterly valueless estimate might be made of the amount of water stored in it.

Now while, as I have stated, the underground reservoirs have proven of incalculable value to Southern California during the decade just passed, and have not only carried the country through this period, in spite of the fact that the greater part of its earlier development was carried out during and upon the basis of a decade of excessive rainfall, but have actually permitted a continual increase of acreage under irrigation, it is not to be expected that this result has been attained without affecting the water level in the reservoirs.

Water levels have, in fact, declined notably, artesian areas have shrunk, and pressures in wells still flowing have decreased markedly. The thing which causes most surprise is that these shrinkages have not been more violent. The underground supplies have been attacked in front and rear. The summer, and a part of the winter flow of the mountain streams is diverted at the canyon mouths and used for irrigation, where formerly all of it sank into the gravels and joined the underground supply. A few storage reservoirs have been built which hold a part of the winter flood waters that are now and always have been the chief source from which the ground waters are replenished. Thus not only has the supply been less during the past decade because of drouth, but it has been further curtailed because of diversion and storage. In addition to this indirect attack, the great number of artesian wells and pumping plants which have been put in have directly attacked the quantity of stored waters. It is estimated that of the 225,000 acres under irrigation in the valley of Southern California at present, two-thirds are dependent upon developed underground waters, about 400

Good Health to the Children

Children especially are fond of dainties, and the housekeeper must look carefully to their food.

As good cake can be made only with good eggs, so also a cake that is healthful as well as dainty must be raised with a pure and perfect baking powder.

Royal Baking Powder is indispensable in the preparation of the highest quality of food. It imparts that peculiar lightness, sweetness and flavor noticed in the finest cake, biscuit, doughnuts, crusts, etc., and what is more important, renders the food wholesome and agreeable to young and old.

to 500 second feet of which are used while the surface streams supply but 200 or 250 second feet. These relations are not fixed, there being a large acreage which is irrigated with surface water when this is abundant, but with well water when the streams are low. But the irrigation from developed water alone is increasing, while that from streams is at a standstill, or is shrinking, the flow of certain important streams which are due to rising ground waters having diminished during recent years.

(To be continued)

PATHOLOGICAL STATION

The following official statement concerning the pathological station is from the commission appointed to select a site therefor:

A laboratory and experiment station for the study of plant diseases is to be established at once in Southern California through financial support furnished by the state that the work may be undertaken by the University of California, as a part of the activities of its Department of Agriculture.

The State Commission for the selection of a location for the pathological laboratory and experiment station, a board consisting of Gov. Pardee, President Benj. Ide Wheeler of the University of California, and Professor E. J. Wickson of the chair of Agricultural Practice in the University of California, is now ready to receive proposals in regard to a site. It is expressly set forth in a bill providing for this work that lands already belonging to the state at Whittier or at Patton may be used if the commission so decides. Should other communities in Southern California, however, make offers particularly advantageous in character, the commission will be glad to entertain such proposals.

The appropriation made by the last Legislature provides that the pathological laboratory shall be equipped with the buildings, material and appliances necessary for the

study and determination of the cause of diseases and the condition of orchard trees, fruits and vegetables. It shall provide the means for a thorough examination of fungus, bacterial, and other maladies, insects, pests and diseases, and their remedy or prevention; the condition of the soil; cultivation and location that may tend to imperfect nutrition and all physiological and other defects that may affect the economic production and marketing of horticultural products.

The pathological laboratory must be located in one of the seven southern counties of the state. The commissioners are empowered to select the location, to perfect title to it, and to provide for the purchase of lands or for the receipt of lands as a gift.

When the site has been fixed, either upon land already belonging to the state, upon land presented by communities or individuals, or upon lands purchased, the Regents of the University of California are directed by the appropriation act to proceed with the construction of a laboratory building, to keep and maintain the laboratory, and to receive and manage gifts, leases, or bequests for promoting the purposes of the act.

The Regents are directed to select not less than two experts in plant pathology, and such assistants as may be needed. These men are to have active charge of the laboratory and of the investigations and field experiments. They must reside at or near the laboratory and devote their entire time to the investigations required by the Regents. The results of their work are to be published from time to time. Their salaries are to be fixed by the Regents.

The State Commission is to select a location, also, which may be on the same lands as the pathological laboratory, or elsewhere if preferred, for a branch Agricultural Station or Stations, to carry on experimental investigations in connection with the other agricultural work of the University of California to ascertain the best methods of agricultural management; for the investigation of fertilization; of irrigation; of improved methods of handling fruits for market; for the introduction of new varieties of fruits; and for such other investigations as may be deemed advisable to promote the horticultural interests of Southern California.

The Commissioners may accept gifts of lands for these purposes or may select lands already owned by the state in Southern California. It is provided that if the station be located at the Whittier State School or at Patton, the site of the Southern California State Hospital, not less than fifty acres of land shall be devoted to the experiment station. Land must be selected which is supplied with sufficient water for its proper irrigation.

The Regents are required to adopt a general plan and schedule before the beginning of each fiscal year which shall describe the investigations and experiments to be pursued during the year, and it is to be the duty of the Regents to receive and consider written statements from individuals and associations in various branches of horticulture, conveying plans or suggestions for investigations which they may approve or desire.

In accordance with the terms of the legislation the Commission invites proposals of land, and the Regents invite suggestions as to the work to be undertaken.

Proposals in regard to both these matters should be filed on or before July first with the Secretary of the State Pathological Station Commission, Mr. V. H. Henderson, Berkeley, California.

A Re-Conquest of Nevada

Has Nevada always been an arid and desert region? Its geological records, as indelibly carved in sandstone and granite, showing the shore lines of ancient lakes, proclaim that it has not, but that at one time a vast body of water, as great in area as Lake Erie, covered a portion of the state. Today, however, the aridity of the country is unquestioned and the 350,000 acres, to part of which Uncle Sam is about to apply water, will practically double its well irrigated area and its agricultural

The Brownsberger
HOME SCHOOL
 Incorporated
 953 W. 7TH ST. LOS ANGELES, CAL.
 A thorough business college. Beautiful home surroundings. The school owns its own property, 95x250 ft. The policy of the school is broad and liberal. Over 100 typewriters. Over 100 roll-top desks. Complete bank equipment. Business training and bookkeeping may be combined with shorthand. Each pupil may have a machine free at home and gain time in school. Day and evening sessions. We invite investigation. Send for catalogue and college paper. Correspondence invited.
 F. BROWNSBERGER, Business Manager

Nevada's ancient inland sea is known as Lake La Hontan; it was one of several great pre-historic lakes distributed over the Great Basin of the arid region, among them Lake Bonneville, of which the Great Salt Lake was the deepest portion. Its area was nine times greater than the Great Salt, or almost as large as Lake Michigan and much deeper.

The contracted remains of Lake La Hontan in Nevada are found in Pyramid Lake and a number of other small enclosed lakes which were the deepest portions of the ancient lake. Since these large pre-historic lakes were land locked and did not overflow, it follows that the rainfall which fed them was much heavier than it is today.

DROWNING OUT THE MORMONS
 Should conditions revert, many of the important points situated in the

Nasal CATARRH
 In all its stages.
Ely's Cream Balm
 cleanses, soothes and heals the diseased membrane. It cures catarrh and drives away a cold in the head quickly.
 Cream Balm is placed into the nostrils, spreads over the membrane and is absorbed. Relief is immediate and a cure follows. It is not drying—does not produce sneezing. Large Size, 50 cents at Drug-gists or by mail; Trial Size, 10 cents.
ELY BROTHERS, 56 Warren Street, New York.

Great Basin would be hopelessly flooded, such for instance as the Mormon Temple, which would stand in 850 feet of water, while 700 miles of railroad would be submerged.

These pre-historic lakes are said to be of very recent origin—that is, recent by the geologists' count—perhaps 30,000 or 40,000 years old. Fossils have been found showing the presence of primitive man along their ancient shores and embankments, which in many instances are as perfect in contour and as distinct as if the waters had receded only a few years since. These lakes included such arid and fear-inspiring localities of today as the Black Rock Desert, Skull Valley,

Nasal Catarrh quickly yields to treatment by Ely's Cream Balm, which is agreeably aromatic. It is received through the nostrils, cleanses and heals the whole surface over which it diffuses itself. Druggists sell the 50c. size; Trial size by mail, 10 cents. Test it and you are sure to continue the treatment.

Announcement.
 To accommodate those who are partial to the use of atomizers in applying liquids into the nasal passages for *catarrh of the nose*, the proprietors prepare Cream Balm in liquid form, which will be known as Ely's Liquid Cream Balm. Price including the spraying tube is 75 cents. Druggists or by mail. The liquid form embodies the medicinal properties of the solid preparation.

Death Valley, and a score of other places where the bleached bones of man and animal attest to an awful lack of water.

GREAT GOVERNMENT IRRIGATION WORK

This first irrigation work of the national government, which is to be celebrated by the turning of the water into the gigantic ditches this month, is the largest project which has been definitely outlined and approved under the irrigation act—known as the Truckee-Carson project. When com-

pleted it will involve the expenditure of approximately nine million dollars and will reclaim 350,000 acres of desert land. That portion of the system now completed consists of a canal 31 miles long to take water from the Truckee river and convey it to the Carson river, where a large storage reservoir is projected. Just below this reservoir site the waters of the two streams will be led out upon the plains by two canals, with a combined capacity of 1,900 cubic feet per second. Some 50,000 acres are to be irrigated this spring, for which 200 miles of small distributing ditches have been dug.

The Secretary of the Interior has set aside \$2,740,000 of the "Reclamation Fund" for the initial work, and by the time this has been expended about 100,000 acres will be under canals, and the settlers will be returning in annual payments the original investment. The money thus received will be used as a revolving fund for the completion of this project.

The McCormick is the best mowing machine and rake in the world. You will find them at STERN BROTHERS, Anaheim.

Orphans
 Anaheim, April 11th, 1905.
 The following boys have been admitted into St. Catherine's Orph. since the last publication.
 Whole Orphans—Emmanuel Reed aged 9 years, Manuel Gailion aged 3 years.
 Half Orphans—Harry Horan aged 8 years, 10 months, Joseph Horan aged 8 years, Alexander secundus aged 7 yrs, Carlos Vejar aged 8 yrs, Leopoldo Vejar aged 6 yrs, Alfonso Vejar aged 5 yrs, Ignacio Ortega aged 5 yrs, Willie Kruse aged 5 yrs.
 ap13-4

A mineral discovery has been made in San Diego county that may be worth millions to California. Phosphate rock has been picked up as float near Escondido and samples have been forwarded to the State Mining Bureau for examination.

The value of phosphate rock is that it contains fertilizing material that can be used for enriching the soil. If the rock is as rich as is supposed and the deposit is large the result of this discovery may be to add great values to the mineral output of this state.

Two years ago, according to the report of the United States Geological Survey, the phosphate rock product of the United States amounted to 1,570,288 long tons. The value of this rock was \$4,993,912. That is, as will be seen readily, the value per ton ran on the average as high as many low grade gold properties, that, worked economically, are paying largely.

Phosphate rock has never been known to California as a native product until now. North Carolina, South Carolina and Florida have afforded the principal if not the only native supply of mineral fertilizers for the United States.

TERRIFIC RACE WITH DEATH

"Death was fast approaching," writes Ralph F. Fernandez, of Tampa, Fla., describing his fearful race with death, "as a result of liver trouble and heart disease, which had robbed me of sleep and of all interest in life. I had tried many doctors and several medicines, but got no benefit until I began to use Electric Bitters. So wonderful was their effect that in three days I felt like a new man, and today I am cured of all my troubles." Guaranteed at Hutchinson's drug store; price 50c.

THE HOME OF VINOL

To Nursing Mothers

There is no time in a woman's life when she needs strength more than when she is nursing a child. She must sustain the life of two persons. We never sold a remedy equal to Vinol to create such strength. We cordially invite any weak and run-down woman to try Vinol on our promise to return her money if she is not fully satisfied. Isn't that fair?

Respectfully,

W. B. Hutchinson, Druggist

Look! Look! Look!

The first crate of Coachella melons sold in Chicago last season for \$22. The expressage amounted to \$4 50 per crate. There were 45 melons in a crate, which made these melons bring 40 cents each to the grower. Melons are now ripening, and the first shipment will go forward this week. This year's crop will total 300 cars containing each 300 crates of melons. The Coachella growers have an expedited freight rate of \$2 per 100 pounds to Chicago, shipping a quantity not less than five cars, and frequently having ten cars of melons in a train, reaching Chicago in four days. This is, we believe, the only service of the kind granted California growers. Northern county cherry producers have tried for it, but have been unable thus far to secure it. C. E. Holcomb, who is now organizing a new national bank in this city, and who is largely interested in melon culture at Thermal, states the first melons will probably be shipped by express this week, and will in a few weeks go forward in five and ten carload lots daily. The Rocky Ford melons do not come in until August, and so the California growers have practically a monopoly of the trade, for the Coachella melons are pretty well cleaned up by the time the Colorado melons reach market.

THE Yorba reservoir, if it were filled with water at this moment, would, according to one of the largest stockholders in the water company, permit of the inclusion of 2000 acres of new land into the company's boundaries. We know how the average irrigator regards the enlargement of the irrigable area, especially when runs are far apart and water shallow at outlying points; but say 1000 acres of new land were included, the cost of the reservoir would be more than met by sale of new stock covering this new acreage. In the opinion of this irrigator, and his views are shared by many others who have given the subject close attention, the reservoir would not only instantly solve the water storage problem, but would indubitably admit of a large increase of the water company's limits. Suppose a thousand shares of new stock were sold at \$60, here would be more than enough to pay for the reservoir; say 2000 shares were sold, and we believe the reservoir could easily supply that area in addition to the present limits, and what sort of an investment would this be for the company?

Within the past five years upward of 200 pumping plants have been installed within a radius of three miles of this city, east, south and west. These pumping plants supply an area which could and should be watered by this reservoir. Had the reservoir been in existence, we doubt if many of these pumping plants had been brought into existence. How much have these pumping plants cost? At an average expenditure of \$2500 each, the total cost comes to the amount of \$500,000—stupendous, is it not. Here we have private capital expending half a million of money to procure water, and making handsome returns upon the investment, while the water board has been making faces at one another and pulling hair relative to the propriety of expending a fifth of this sum for the construction of a reservoir which would

have saved these irrigators the sum of \$450,000—ridiculous, is it not?

The time has arrived for this unbusiness like procedure on the part of some of the directors to cease. We have hitherto shown how one man succeeded in delaying this work for years simply because he could not be in charge of its construction. He is on public record as favoring it, so long as there existed a prospect of his getting his hands upon the construction of the enterprise; but when superseded by a more capable man, he turns about and succeeds—oh, shame upon the board of directors be it said—in deferring work indefinitely upon the project. The weakling whom this conspirator led by the nose in his devious paths of obstruction to this enterprise—may a forgiving providence have mercy upon his soul.

The farmers around Anaheim have been forced to the expenditure of half a million dollars in order to secure water for their orchards; and it has been such a paying investment that new pumping plants are being installed almost daily. A reservoir costing a fifth of this sum would have answered every purpose, and effected this enormous saving. A meeting of water stockholders has resolved unanimously to construct a reservoir, to meet these contingencies, and to do away with the necessity for irrigating at night. Another bond election will be called in the fall, and if the votes of these pumping-plant irrigators, as well as all others of this section, are desired in favor of the bonds, let suitable provision be made for the Yorba reservoir. Otherwise the bonds will never carry.

TRAVELERS over the Placentia road leading into town are loud in their complaint about the condition of the wash near Crowther's corner. Supervisor Linebarger has ignored this piece of road, and should give it a bit of attention. It is one of the most important public thoroughfares leading into this city, and its present disgraceful condition is a crying shame and a reproach upon those responsible for it. A few loads of earth are hauled upon the road over the wash, and this is swept away by the first freshet. This has been the manner of dealing with it all winter. This is about as good a way of spending the people's money as could be devised. A load of hay, tipped from the wagon in the wash last winter, lies rotting at the side of the road, a fit warning for all to steer clear of the dangers that beset the thoroughfare. The wash should be bridged. What's the matter with a bridge over the barranca, Mr. Supervisor?

WE are in receipt of a number of advertising propositions from Goldfield, Bullfrog and other mining points in Nevada, all of them offering mining stock at low figures and promising the biggest kind of dividends. These advertisements have been consigned to the waste basket, for the reason that they are all fakes. That Goldfield has valuable mines in its district is undoubtedly true; and this is true of Bullfrog, Las Vegas and other places on the new Salt Lake railway. But these schemes that are being blazoned broadcast in the newspapers—take our advice and let them severely alone.

THE President has returned to civilization. That is, he's got back to Chicago.

APPLICATION for stock in the United States National bank now forming here have been particularly brisk since the names of I. W. Hellman, J. H. Graves and Senator Clark have been connected with the enterprise. To be sure, the success of the venture was assured before the names of these

gentlemen became associated with it, and that they have consented to take stock in the bank furnishes additional proof that an inviting field for another moneyed institution offers in this rapidly growing community. Moreover, it is a particularly happy circumstance that these gentlemen are to become interested in our financial welfare, along with the local moneyed men backing the new bank. Mr. Hellman is probably the foremost financier on the coast. He is president of banks having resources of \$70,000,000. He has large interests in Orange county, and owns a large area of water-front property at Anaheim Landing, Bay City and other shore and interior points. Mr. Graves is manager of the Farmers & Merchants' bank of Los Angeles, and is well-known throughout Southern California. He will be president of the new bank. Senator W. A. Clark, being the owner of the Los Alamitos sugar mill, it is fitting that he should become identified with an institution of this character in this city. He has done much to develop the resources of Orange county, and we happen to know that he regards this section as one of the richest in the state. It is a pleasing prospect to note the advent of these gentlemen into the business interests of this community.

Beneficial Bacteria for Leguminous Crops

(Continued from Page One)

culture." Naturally, the explanations offered to account for this beneficial effect were various, perhaps the most versal belief being that the root system of these plants was much more extensive than that of grains and root crops, and consequently brought up plant food from considerable depths, which not only served the legume, but was likewise available for subsequent crops.

The actual benefit of the presence of root nodules upon various leguminous plants has been so thoroughly demonstrated by numerous observers, both in this country and abroad, that it hardly needs further proof at this time. The early work of Helriegel and Willfath, together with that of Lawes and Gilbert and of Warington in England, and of Atwater and Woods in this country, was quite sufficient to demonstrate the direct connection between the acquisition of nitrogen in some way by the plant and the presence of the tuber-like swellings on the roots; and there are few, if any, who would maintain that this peculiar function is not, under most circumstances, distinctly beneficial. Indeed, by using clean sand, burned free of all organic matter, it is possible to demonstrate beyond question that leguminous plants will make a more vigorous growth when furnished with nitrogen by nodule bacteria than when it is supplied as fertilizer and nodules are absent. In pot experiments with vetch the inoculated plants exceeded nearly three times by weight those receiving nitrogenous fertilizer, while plants having no nitrogen supplied them were insignificant in size. With the exception of the nitrogen element, the nutrient solution used in watering the pots was the same in all three cases. Similar results have been obtained in the field.

G. L. Thomas experimenting with field peas on his farm near Auburn, Me., made a special test with fertilized and unfertilized strips, and stated that "inoculated seed did as much without fertilizers of any kind as seed not inoculated but supplied fertilizer (phosphate) at the rate of 800 pounds and a ton of barnyard manure per acre."

With garden peas S. N. Lowry of Philadelphia found that "inoculated vines yielded one and a half the crop yielded from ground not inoculated, but which was manured;" and Jeremiah Gardner of Gaffney, S. C., wrote "My cowpeas were better than those of others who used commercial fertilizer. They ripened early and evenly. I consider inoculation a boon to agriculture."

Federico Narro of Saltillo, Mexico, noted the following result with alfalfa: I have seen the progress of the inoculated alfalfa in the fields of J. Garcia Rodriguez and although failure was expected by the people who knew he was going to sow alfalfa without manure, it is already coming out nicely and more even than the alfalfa sown in land covered with 8 or 10 inches of manure.

Tim Carroll has returned from Vancouver, B. C., where he installed a number of his patented dunks.

Always Reliable

For a Short Time Only we place on sale about 5 doz of fine Felt Hats, their former price being \$3, \$2 50 and \$2, at the uniform price of

One Dollar Each.

These are broken lines from this and last season and to close them out entirely we have made this sacrifice. Never before has there been offered such a bargain in Anaheim. STYLES TO SUIT EVERYBODY.

We have added to our Hat Department a fine line of the celebrated STETSON HAT, in the best staple styles and of fine quality—\$4 and \$5 each.

LOCAL EVENTS

Born, April 5, to wife of J. H. Gilmore, a daughter. Weight, 13 pounds.

Jack and Walt Hunter were visitors in town on Saturday from Fullerton.

Miss Annie Everhardy who has been seriously ill with typhoid fever for several weeks past is convalescing.

John Everhart, wife and young son were guests on Sunday of Mr. and Mrs. Julius Schneider.

Eddie Marlon has taken a position with the Standard as driver of a distillate wagon.

Mr. and Mrs. W. H. Spake and little daughter were visitors in Los Angeles Tuesday.

Miss Belle Lyons of Los Angeles visited over Sunday with Miss Nona McWilliams.

Mrs. Richard Burmester of Los Angeles was a guest the past week of Mrs. Melrose.

The ladies of the Catholic church will give a card party in Backs' hall on Tuesday evening, May 16.

Mrs. J. Fred Ahlborn has been ill during the week, but at latest accounts was improving.

Rev. Markle will preach the Memorial sermon at the Christian church on Sunday, May 28th.

Stuart Cargill came in from the territory this week for a few days visit with Wallace Scott.

Mrs. W. B. Hutchinson will entertain the Miercoles club on Wednesday afternoon next, the 17th inst.

Curt Epstein of Freiburg, Germany, a nephew of Wm. Falkenstein, is on his way to Anaheim, and will locate permanently.

Mrs. F. C. Spencer and Mrs. Henry M. Adams are in San Francisco attending the annual meeting of the grand lodge of Rebekkas.

Wm. Falkenstein is asking bids for the construction of a \$2500 residence on Broadway which he hopes to have in course of erection within a fortnight.

Capt. Stern has received instructions from Brigadier General Wankowski to the effect that the first brigade will parade in Los Angeles July 4th. Capt. Stern will have a full company in line on the occasion of the parade.

Dr. W. W. Adams leaves today for Ventura, where he will take up his permanent abode. He will be succeeded by Dr. Wilson, an osteopathist, recently arrived from the east, who will assume his practice.

Peter Nicholas and family leave today for New York, whence they sail on the 18th on the steamer Savill for Havre. The party goes by way of New Orleans and Washington, and will be absent six months.

Recorder Howard pronounces the public morals of the city to be better than for years past. Only two arrests were made by the police department during May, and these were for trivial offenses.

Forty-one hundredths of an inch of rain fell on Sunday afternoon and during the early hours of Monday morning, bringing the total for the season up to 15.93 inches; last year to date, 7.44, according to Mr. Dickel's gauge.

The Iowa Association will hold its annual picnic at Orange County park, Saturday, May 20. Music will be furnished, short addresses and other things on the program will be given. A cordial invitation to all.

Mr. Kealther has returned from Long Beach, where he was engaged in the erection of a cottage for a resident of the beach, and is now preparing to install a 25-horse power pumping plant on his ranch west of town.

The suit of the inter-urban railway company against C. E. Sweetzer of Garden Grove was called in the superior court on Monday morning. Suit was brought to condemn property for right of way for the Los Angeles-Santa Ana electric line.

Wm. Crowther and two daughters left on Sunday evening for San Francisco, en route east. In the northern city they were joined by Miss Mabel Seale, who will accompany them on their tour of Europe. The party sails on the Cunard line from Boston May 21st. They will be absent four months.

Mrs. Elizabeth Schumacher of this city is the new owner of the Federman corner, she having purchased the property from L. M. Davenport of Los Angeles, the price being quoted at \$15,000. Mrs. Schumacher buys as an investment. The corner has been the object of considerable rumor of late, a persistent report having it that it will be remodeled and occupied by the new National bank. In that event

Mr. Federman will erect a large department store on his lot at the corner of Center and Claudina streets.

John Hartung, vice president of the First National bank, was a business visitor in Los Angeles during the week.

Articles of incorporation of the Blade publishing company were filed with the county clerk on Monday. The capital stock is \$30,000.

Mrs. A. J. Lawton of Santa Ana is in Marysville attending the annual convention of the Women's Relief Corps, of which organization she is state treasurer.

R. H. Gilman was a visitor in town from Placentia a day or two ago. Mr. Gilman is engaged in shipping oranges to the eastern market, which is particularly inviting just now.

F. Maurer of Cleveland, Ohio, brother of Fred Maurer, and his sister, Mrs. Kraus of the same city, who have been his guests for some weeks past, departed some days ago for their homes in the east.

Henry D. Tuffree of Placentia and Miss Edythe Polley of Los Angeles were married at Ocean Park on Thursday last. The young couple have many friends in Orange county, who extend congratulations over the happy event.

Mr. and Mrs. W. L. Tubbs of Santa Ana start this week for an extended visit to their former home in Iowa. Mr. Tubbs recently disposed of his drug store at the county seat and will travel extensively throughout the east before returning.

Doc Sellack was in town this week from San Diego, where he now resides. He drove up in his own conveyance, consuming two days in the trip. He reports San Diego enjoying a steady growth and considerable improvement going on. The Doc tips the beam at 320 pounds, being a trifle lighter than when he roamed the wilds of Orange county. He used to weigh 376.

A. W. Freeman, son of Dr. Freeman of Fullerton, was married in San Antonio, Texas, recently to Miss Myra Work of that city, where both are well known young people. Mr. and Mrs. Freeman came direct to California and were guests of Dr. and Mrs. Freeman the past week and are now in San Francisco. They will locate in northern or central California.

Bowman Merritt, son of City Clerk Merritt, has graduated as a pharmaceutical chemist from the University of California, department of pharmacy, and has been granted a license by the State Board of Pharmacy to practice his profession in this state. Bowman has been attending the University for two years. He is expected home next month, and may locate here.

Benj. Kraemer has taken the school census in Placentia district and finds 178 census children, an increase of 20 over last year. Ben has taken the census fifteen years and says up to a few years ago the boys and girls were even in number, but now the boys are far in the lead. This increase will give Placentia another teacher. A majority of the people of that section favor fitting up another room in the present building instead of building another small school house in upper Placentia.

N. Hart, as administrator of the estate of the late Mrs. Metz, is preparing to close up the affairs of the estate. Deceased left \$30,000, one half of which has been disbursed according to the terms of the will, and \$15,000 remains to be divided between five heirs. One of the heirs, living in Philadelphia, has not yet been located, although diligent search has been made. Division of the money is withheld until this missing heir can be found, if alive; and if dead, the money will be divided equally among the remaining heirs. The money is in banks drawing interest, it being deposited in equal parts in two Los Angeles banks, the First National here and one bank at Santa Ana.

Misses Sarah and Ruby Crowther, who departed this week for an extended trip through Europe, were given a farewell party Thursday afternoon by Mrs. E. K. Benchley and daughter, Mrs. J. R. Carhart. A number of their Placentia friends and neighbors were present. The guests were entertained during the afternoon with "Flinch," at which game Miss Elsa Bradford won first prize, a handsome hand-painted china plate, and Miss East, second prize, a decorated china platter; Mrs. Staley was awarded the booty. Refreshments were served, the table being handsomely decorated in green and pink. A huge cluster of pink sweet peas and ferns adorned the center of the table, while tiny pink May baskets, filled with sweet peas and tied with green ribbons, were set at each place at the table and accepted by the guests as favors. Oyster parties, sandwiches, cheese straws, coffee,

cake and pistachio ice cream were served.

Mr. Suwa, a Japanese who is investigating the honey industry in this country for his government, is spending two weeks at Emerson Bros.' bee ranch above Placentia. He is making a special study of this and other industries and will be in the United States several months.

A big jump is reported in the cabbage market and the output this week from Fullerton has been sold at \$12 a ton, being an increase of \$4 on the ton over the price paid the past four weeks. The California Vegetable Union has contracted to move twenty cars for the week and M. M. Cobb will also ship from his packing house five cars.

Wm. O'Meara, a Santa Ana youth, was caught by the city marshal of that town, in the act of passing a sack containing two dozen bottles of beer over a fence in the rear of the Rossmore hotel, and was fined \$25 by the recorder. Wm. Fleming, who was with O'Meara, was also arrested. He pleaded not guilty, and was released on putting up \$500 cash for his appearance in court.

Isidore Poirier of Orange had his leg amputated one day last week, at a Los Angeles hospital, and is reported as having poor chances for recovery. Poirier was supposed to be poor, but it is learned that he owns property worth \$15,000 or more. His personal belongings have been cared for by a cousin from Los Angeles, who came to Orange last week.

Mrs. Carrie Ford, school census marshal of Fullerton, has completed her work of taking this year's census of school children in that district and has located 327 children of school age and 115 children that are not quite old enough to attend school, making a total of 442 children from the 199 families in that district, a gain of 18 scholars this year.

F. W. Fleishman will in a few days begin the erection of a corrugated-iron foundry on the lot east of Yungbluth & Kruger's establishment, for use as a temporary meat market during the erection of the new Odd Fellows hall. Bids for the latter will be opened on Saturday, and the brick shop at present occupied by Fleischman will be torn down to make room for the new building.

Fred Schmidt, superintendent of bridges for the Santa Fe, has completed a \$10,000 bridge over the river south of this city for that company. He is now engaged in repair work at various points between here and Los Angeles, and goes next week to Oceanside, where a new bridge will be constructed over a slough. Mr. Schmidt has twelve men in his employ and his monthly labor bills amount to \$1000.

At the residence of R. J. Sparks, on the Garden Grove road, Sunday week, a barbecue in honor of the birthday of Mr. Sparks' father, who is 86 years old, was attended by seventy people. Members of the Sparks family gathered from near and far to celebrate the happy event, and none seemed happier than Grandpa Sparks, who was the recipient of congratulations from all. The family is composed of well known and highly esteemed people of this section. A very enjoyable birthday party was participated in by all.

Floyd Friend, the sixteen year old son of Mr. and Mrs. A. F. Friend of Huntington Beach, died at the Santa Ana hospital on Friday night from the effects of burns received in a gasoline explosion two weeks ago. The boy was working in a bicycle shop of B. F. Wheeler when a gasoline brazier exploded, burning both men and setting the shop on fire. The building was totally destroyed. Wheeler's burns were not serious, but young Friend had the flesh on his face and hands so terribly seared that his case was hopeless.

Dr. Johnston is learning Spanish. The other day, in calling on a patient of that nationality, the doctor desired to advise him to eat eggs, but the astonishment of the latter might be imagined, if it could be described, when the doctor told him to eat "eyes." The doctor had mixed the two words up in his spelling book. Explanations followed, and the man, like all the doctor's patients, is getting well.

Joe Fiscus reports some of the walnut trees on his ranch leaving out finely, while others seem to be as backward as three months ago. He attributes the phenomenon to the fact that those trees which are now covered with new foliage are those which shed their leaves the earliest in the fall, while the others are those which retained them the latest. Those trees which are now in leaf and bud, give every promise of a good yield, while the others will probably be along with the same story with the resumption of our usual spring weather.

City Clerk's Annual Report

City Clerk Merritt submitted his annual report to the city trustees on Tuesday evening. The report is a voluminous document, prepared in Mr. Merritt's usual accurate and artistic style. It shows among other items the following:

Collected for licenses during the year, \$5783 75; electric lights, \$5780; water, \$3285 25; total, \$14,849.

Total taxes collected during year, \$7942 08; delinquent list, \$20 80.

The report shows that 138,380 feet of cement sidewalk was laid during the year, and 26,574 feet of curb.

Cost of labor on streets, gravel, etc. \$5364 16; 15 cars crude oil used on streets at a cost of \$2060 09. Street sprinkling cost \$438 75; electric lights on streets, \$2436; total, \$8238 91.

City teams cost \$6 05 per day for 309 working days.

Salaries of public officers (marshal, clerk and treasurer) \$1872 69.

The water works showed a surplus of receipts over expenditures of \$10 82; electric lights, \$659 56.

There are 33 arc lights upon the streets, which cost the city \$6 each per month. The arcs are of 2000 candle power. The rate is thought to be the cheapest of any city of this size in the state. The new jail cost \$846 75.

Buena Park

Rev. O. L. Corbin, census marshal, reports 74 children of school age. A slight decrease from last year.

Val Brown and Mike Ryman left on Tuesday in their automobile for Bakersfield. Later they will go up Kern river and may take a run over into Goldfield. They are out on a prospecting and pleasure trip.

Rev. Corbin and Harry Whitaker returned on Saturday from a trip over to Wilson's peak. Harry says the trout were scarce.

Miss Dixy Hickey and Mr. Thatch were given a "china shower" at the home of the former on Saturday evening. A large concourse of their friends were present and a most enjoyable time was had.

Rev. Herbert E. Hayes of San Francisco is visiting with old-time residents of the Park.

Glenn Moon is now engaged at the front chair in the tontorial parlors and his feathery touch never fails to lull his patrons to sleep while undergoing the eradication of their hirsute appendages. Next!

Claude Mallory and Fred Bowhay have departed for their eastern home.

It is the intention to start a free reading room here. It would furnish useful information to young people and be a source of much good to them.

The improvement on the hand stamp for can labeling devised by Messrs. Osborn and Smith is said to be an ingenious contrivance. There may be millions in it.

The park team journeyed to Anaheim last Saturday and met defeat at the hands of a local ball nine there to the tune of 5 to 0.

One Day Open Season

The Los Angeles Supervisors have instructed the District Attorney of that county to draft an ordinance limiting the open season for doves to one day, August 15th. This action was taken largely as the result of petitions of bird lovers of the county who protested that the dove was not a game bird. The Fish and Game Protective Association is up in arms over the new ordinance and are bringing every pressure to bear to have it repealed.

Other hunting seasons are shortened as follows: Deer, August 15th to October 1st; Mountain quail, September 1st to October 15th; Valley quail, November 1st to February 1st.

Oratorical Contest

The Anaheim High School is pleased to announce that the regular annual oratorical contest between the Orange County High Schools will be held at the Anaheim opera house, Friday evening, May 19. The contestants from the home school are Harold Pellegrin, senior, oration; Fayette A. Lewis, middle, oration; Leah B. Lawrence, junior, essay; Rollo Davis, sub-junior, declamation. Admission, 15c. The public is cordially invited. Further announcement will appear next week.

Resolution of Condolence

At a regular review of Anaheim Tent No. 9, K. O. T. M. O. T. W. held May 6, 1905, the committee appointed to draft resolution of sympathy on the death of Sir Knight Alexander Huch, one of the Tent's charter members, offered the following:

IN MEMORIAM

Whereas, God in His all-wise providence, has taken from our midst Sir Knight Huch, be it therefore

Resolved, that this Tent recognize with profound sorrow the death of Sir Knight Huch, a faithful member and a loving husband and father, and that the sympathies of this Tent are hereby extended to the bereft wife and

children and all relatives to whom our beloved Brother was dear. And in their affliction we recommend them to the Commander on high, a never failing help in time of sorrow and trouble.

W. C. Young Committee
E. B. Merritt

The above resolution was adopted unanimously and ordered spread upon the minutes and a copy sent to Mrs. Alexander Huch.

Baseball

The Owls and the Oil Wells endeavored to play a game of ball on Sunday afternoon on the local diamond, but at the fifth inning the game was called on account of rain. The score—let us try to forget it—was 13 to 4 in favor of the nocturnal hooters. Briseno handed the boys the same medicine he gave them upon his previous visit, much to their discomfort. There was a stiff south wind blowing and Crips had a lame arm, which prevented him from doing justice to himself. The Owls hammered him all over the diamond for three innings which circumstance aided and abetted by errors of the worst kind on the part of some of the other players, was responsible for the unheard-of score. Burnett went into the box at the fourth inning and after warming up those of the Owl boys he did not fan out he soaked with the ball. In the first inning the Owls made six runs and the others were conveniently scattered along the line. In the third inning Jack Burnett knocked a homer bringing in Meats and Isbell ahead of him. In the first inning he made the only tally in a walk and that was about all there was to it.

Redman who played shortfield for the Owls is a crackjacked and did much to retire the foothillers. The game was unsatisfactory to the fans and it seemed as though the rain came providentially to end the misery. Manager Young has lost some of his best players and is striving hard to build up the team. Any local young men who have an idea they can play ball and make good should place themselves in communication with Young at once.

The Olinda will meet their old antagonists, the Tufts-Lyons of Los Angeles, at Athletic park next Sunday afternoon at 2:30. Easterly will catch for the oil men and Meats play third base.

R. Fossek is having all kinds of trouble with sixteen stands of bees on his place on Elm street. The busy creatures have stung several persons of late and residents of the neighborhood are up in arms against them. Mr. Fossek has endeavored to dispose of them, but has thus far been unable to do so. Some days ago he put one tire out of commission by sulphuring the honey-makers, which were preparing to swarm. He dislikes to destroy the others, and will seek to dispose of them to mountain bee men.

High school students are rehearsing "The Taming of the Shrew" for their class day exercises the latter part of next month. They have employed a professional instructor from Los Angeles and have weekly rehearsals. There are 19 students in the graduating class this year.

County Superintendent of Schools Nichols has made the current month's apportionment of money to the various school districts throughout the county. This distribution is the regular quarterly apportionment of the county school fund and is divided among the districts as follows:

PORTER'S REPORT

To the Board of Directors of the
Anaheim Union Water Company:
Gentlemen: My expenses for the
month of April are as follows.

Regular employees..... \$485 00

REPAIRS

To repair cement ditch below

reservoir..... 9 87

Labor and team work.....

Used 3 bbls. Stanford cement

at \$2.40..... 7 20

To labor and team work to re-

pair ditch between Klokke

and Nenno ranches..... 28 50

Used 4 bbls. cement at \$2.40.....

9 60

To repair cement ditch along

west line C. Miles property.....

Used 4 bbls. cement at \$2.40.....

10 80

To raise ditch A. V. Smith to

date..... 3 50

Repairing sluiceway at head of

Cajon Canal..... 5 25

To raise banks of ditch, clean-

ing storm ways, building up

dam at head of ditch and

cleaning weeds..... 68 50

To repairing North Branch

ditch, Fullerton..... 5 25

143 62

CLEANING

To cleaning cement and earth

ditches Fullerton, Placentia

and Orangehorpe..... 192 92

Cleaning Anaheim laterals.....

38 50

Olinda distributing ditches.....

18 37

To plowing banks of cement

ditch through Yorba prop-

erty at Yorba..... 15 75

To shovel gravel from the ce-

ment ditch below Damron

arch..... 16 65

To hoeing weeds from cement

ditches at Yorba and on

Anaheim flume..... 69 00

To labor and team work with

moss harrow to clean Main

Canal..... 61 50

Total cleaning..... 415 29

CONSTRUCTION

To labor and team work to

complete ditch and pipe line

and raise cement ditch at

slaughter house, Anaheim.....

Used 55 bbls. cement at \$2.60.....

143 00

Wallace to be charged for 200

feet pipe at 18 cts. per foot,

\$36.00.

To cost of labor laying pipe in

front of C. C. Chapman ranch

on the east of O. des Granges

place in Placentia..... 84 40

Used 7 bbls. cement at \$2.40.....

16 80

To labor and team work on

Fullerton on Malden avenue

pipe line..... 154 67

Used 14 bbls. cement at \$2.40.....

28 80

To lay pipe across road in

Sand Wash on Placentia

Avenue..... 5 50

Used 1 sack cement at \$2.40

0 60

To lay pipe crossing for Mrs.

Langenberger at Anaheim,

labor on same..... 2 92

Cement used, 1 sack at \$2.60

0 65

Amount due A. U. W. Co. for

laying pipe and cement fur-

nished..... 3 57

To labor and team work to

date on construction of ce-

ment ditch as per petition of

Schneider, Kossert and

others..... \$282 72

Total construction..... 630 76

Amount to be charged to E.

Michod for pipe 116 ft. at 18

cts. per ft..... 20 88

Cement used on Main Canal

and not reported by me:

Used on Main Canal between

Flume 4 and Yorba Zanjero

house, 372 bbl. at \$2.75.....\$1023 00

Used for repairs 13 bbl. at \$2.75

35 75

Used by Stone and Parrett for

repairs in Placentia and not

heretofore reported: 104 bbls

at \$2.60..... 27 30

Gentlemen: The ditch petitioned

for by Fleischman and others has been

completed, and has also the Malden

Avenue pipe line at Fullerton, with

the exception of some backfilling. The

pipe line recently put in by me op-

posite Chapman place, Placentia, is ac-

ting nicely and I do not look for any

further trouble from it. Will have

completed the construction of the ce-

ment ditch petitioned for by Schnei-

der, Kossert, et al, ere this report is

read. Will say in conclusion that I

have cleared nearly all of our ditches,

both cement and earthen, on the north

side of the Sand Wash, and will have

the Anaheim cement ditches cleaned

in May, as they are seriously in need

of being cleaned.

Respectfully yours,

A. L. PORTER, Supt. A. U. W. Co.

RIGHT TIME TO CURE CATARRH

W. B. Hutchinson Guarantees Hyomei

Will Cure Catarrh if Used Now

The early summer when the weather

becomes warm and settled, is the best

time of the whole year to treat catarrh

troubles with the expectation of

complete and lasting relief.

Everyone who has catarrh, or even

a tendency to catarrh, should use Hyo-

mei now, for the benefit will be gained
twice as quickly and the disease thor-

oughly eradicated from the system.
The complete Hyomei outfit costs
but one dollar, and includes a neat

pocket inhaler, a medicine dropper,
and sufficient Hyomei for several
weeks' treatment. The inhaler lasts a

lifetime, and if more Hyomei is need-
ed, extra bottles can be obtained for
50 cents.

In Anaheim there are scores of well
known people who have been cured
of catarrh by Hyomei. If it does not cure
you, W. B. Hutchinson will return
your money. This is the strongest evi-

dence he can offer as to his faith in
the remedy.

Whitney's Suit

W. S. Whitney has begun injunction
proceedings against the city of Santa
Ana to prevent the installment of a
municipal lighting plant. Whitney

asks that all the proceedings in prepa-
ration for the electric light issue be
declared invalid. Among other
grounds complaint alleges that the

bonded indebtedness which will be in-
curred will cause the total bonded in-
debtedness of the city to exceed the
statutory limit; that \$60,000, the

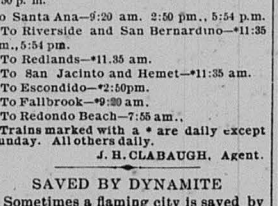

amount of the proposed bond issue, is
greatly in excess of the amount re-
quired to establish a lighting plant, and

that a municipality has no power to
establish and operate a lighting plant.
City officials express the opinion that
the suit was instituted merely for pur-

poses of delay. Dillon and Hubbard
of New York have passed favorably
on all of the preliminary steps in
preparation for the bond issue, and N.

W. Halsey & Co., also of New York,
have written that they are prepared
to purchase the bonds at par.

Notice of Assessment

Anaheim Union Water Company

Location of Principal Place of Business,
Anaheim, Orange county, California.

Notice is hereby given that at a meeting
of the Directors held on the sixth day of May,
1908, an assessment of two dollars per share
was levied upon the capital stock of the cor-

poration, payable on or before June tenth,
1908, to the secretary of the corporation,
at the office of the corporation, in the Backs

building, Los Angeles street, Anaheim, Cal-
ifornia. Any stock upon which this assess-
ment shall remain unpaid on the eleventh

day of June, 1908, will be delinquent, and
advertisable for sale at public auction, and
unless payment is made before, will be sold

on Friday, the thirtieth day of June, 1908,
to pay delinquent assessments, together with
costs of advertising and expenses of sale.

P. H. KRICK,
Secretary of Anaheim Union Water Com-
pany, Location of office, Backs building,
Los Angeles street, Anaheim, California.

**Notice for Publication of Time for
Proving Will, Etc.**

In the Superior Court, State of California,
county of Orange.

In the matter of the Estate of Peter Roth-
schild, deceased.

Notice is hereby given that Friday, the 19th
day of May, 1908, at 10 o'clock a. m. of said
day, at the courtroom of this court, in the
city of Santa Ana, county of Orange, State of

California, has been appointed as the time
and place for hearing the application of
Amanda Rothschild praying that a document
now on file in this court, purporting to be the

last Will and Testament of the said deceased,
be admitted to probate, that letters testamen-
tary be issued thereon to her, at which time
and place all persons interested therein may

appear and contest the same.
Dated April 27th, 1908.
C. D. LESTER, County Clerk.
R. Melrose and F. C. Spencer, Anaheim,
Cal., Attorneys for Petitioner. m4-1

2:50 p.m.

To Santa Ana—9:20 a.m., 2:50 p.m., 5:54 p.m.
To Riverside and San Bernardino—11:35
a.m., 5:54 p.m.
To Redlands—11:35 a.m.
To San Jacinto and Hemet—11:35 a.m.
To Escondido—12:00 p.m.
To Fallbrook—12:30 p.m.
To Redondo Beach—7:55 a.m.
Trains marked with a * are daily except
Sunday. All others daily.

J. B. CLABAUGH, Agent.

SAVED BY DYNAMITE

Sometimes a flaming fire is saved by
dynamiting a space that the fire can't
cross. Sometimes a cough hangs on so
long, you feel as if nothing but dynam-
ite would cure it. Z. T. Gray of Cal-
houn Ga., writes: "My wife had a very

aggravated cough which kept her awake
nights. Two physicians could not help
her; she took Dr. King's New Discover-
y for Consumption, coughs and colds,
which eased her cough, gave her sleep
and finally cured her." Strictly scien-
tific cure for bronchitis and La Grippe.

At Hutchinson's drug store, price 50c
and \$1; guaranteed. Trial bottles free.

Jewelry

Our Goods having arrived, we
will be pleased to have you
call and look over our line,
which is of the

LONG BEACH

A CREEPING DEATH

Blood poison creeps up towards the heart, causing death. J. E. Stearns of Belle Plaine, Minn., writes that a friend dreadfully injured his hand, which swelled up like blood poisoning. Bucklen's Arnica Salve drew out the poison, healed the wound and saved his life. Best in the world for burns and sores. 25c at Hutchinson's drug store.

Jeffery Judson, the Dwarf.

One of the most notable of dwarfs was Jeffery Judson, who was introduced to Henrietta Maria, consort of Charles I., in a noble venison pie. "When the pie was opened," out stepped Jeffery in all the dignity of his eighteen inches and made a courtly obeisance to the astonished and delighted queen, begging to be taken into her service, a favor which was promptly granted.

Jeffery was a man of stout heart and adventurous spirit. He fought two duels, one with a turkeycock and the second with a Mr. Crofts, who faced the little man armed with a squit and was forthwith shot dead. Twice Jeffery saw the inside of prison walls—once when he was captured by the French on his way across the channel and again when he was captured by Barbary corsairs—and to crown his career of adventure he was accused of being mixed up in the popish plot and ended his rather troublous days in the Gate House in 1682.

Women and Tobacco.

Master Prynne, the weak, well meaning Puritan who in 1633 wrote an attack upon the stage, tells us that in his day tobacco pipes were offered to ladies at the theater in lieu of apples between the acts. A French traveler, M. Torevin de Rochefort, who published his journal in 1677, confirms this by telling us that he found smoking a general custom in England, as well among women as among men. Both sexes, he adds, held that life without tobacco would be intolerable "because, they say, it dissipates the evil humors of the brain."

When ladies stopped smoking they took to snuff. Women of quality about a century ago would not stir without their snuffboxes, beautifully enameled receptacles of perfumed mild rappee. Lord Bollingbroke said of Queen Anne and her grace of Marlborough: "The nation is governed by a pair of snufflers. No wonder the light of its glory is extinguished!"—London Standard.

How the Nutmeg Grows.

"A nutmeg tree," said the gardener, "looks like a laurel. The nutmeg tree begins to bear at the age of ten years. It keeps on bearing until it is ninety. The fruit resembles an apricot, and when ripe it bursts open, showing at its heart the black nutmeg inclosed in a network of scarlet. The nutmeg after plucking must be dried. It is dried over a slow fire, and the process is tedious. It often occupies two months. Before shipping the nutmegs are always steeped in sea water and lime. This is to protect them from insects. They have nothing but insects to fear. In an insect proof condition they keep—well, they keep practically forever!"—Minneapolis Journal.

CLEARED FOR ACTION

When the body is cleared for action by Dr. King's New Life Pills, you can tell it by the bloom of health on the cheeks; the brightness of the eyes; the firmness of the flesh and muscles; the buoyancy of the mind. Try them. At Hutchinson's drug store, 25 cents.

Just Streets.

"The highest street in the world," said a globe trotter, "is Main street in Denver, the richest is Fifth avenue in New York, the widest is Market street in Philadelphia and the shortest is the Rue Ble in Paris. This street is only twenty feet long. The dirtiest street is Tchongtai in Nankin, the cleanest is the Via Castle in Seville, the most aristocratic is Grosvenor place, London; the most beautiful is the Avenue des Champs Elysees, Paris. The narrowest street is Via Sol, Havana, which has a width of forty-two inches. The ugliest street is considered by many foreign artists and architects to be Broadway, New York, with its skyscrapers."—Philadelphia Bulletin.

Warsaw's "Social Glass."

The town of Warsaw, Russia, may be called the milk producers' Eden. There is probably nowhere such a "milk town." Restaurants are but little frequented. On the other hand, the public frequents the various dairies in great numbers in order to chat with friends or read the newspapers at the accompaniment of black or white coffee.

fee or a glass of cold or warm milk. To close a bargain or to talk business the milk saloon is resorted to. Chess and billiards are allowed to be played in these recognized places of public resort.—London Times.

When Saddles Were First Used.

It is supposed that the saddle was invented about the middle of the fourth century, but the fact, in the opinion of some, has not been positively proved. Zonaras, the historian, tells us that Constantine the younger was killed in the year 340, when he fell from his saddle. The word translated into saddle also means, however, the back of the horse or the place where the rider sat. It is true, nevertheless, that Sidonius Apollinaris used the word that unmistakably refers to the saddle tree.

The Two Evils.

"There's jest two things that break up most happy homes," observed the Pophick philosopher.

"What's them?" inquired the Squeadunk ignoramus.

"Woman's love for dry goods and a man's love for wet goods, b'gosh!"—Washington Post.

A Simple Statement.

It is told of a certain minister that one Sunday morning he preached his sermon with the following notice: "Brethren, I have forgotten my notes and shall have to trust to Providence, but this evening will come better prepared."

FOR BOTH

One disease of thinness in children is scrofula; in adults, consumption. Both have poor blood; both need more fat. These diseases thrive on leanness. Fat is the best means of overcoming them; cod liver oil makes the best and healthiest fat and

SCOTT'S EMULSION

is the easiest and most effective form of cod liver oil. Here's a natural order of things that shows why Scott's Emulsion is of so much value in all cases of scrofula and consumption. More fat, more weight, more nourishment, that's why.

The Dining Car Service

(From the California Limited Log Book)

It is peculiar that all of us should compliment the Harvey System, and yet we do. It's a habit, and we can't help it. I am really ashamed to say anything further, but I can't abstain. The Dining Car Service on the California Limited is too good to be true.

England's Underfed Children.

In every big town the children of the slums habitually go to school improperly fed. Many of them are not only improperly fed, but the food they do get is far too little in quantity. In the hard winter season, when the building trades are idle, many again go to school either with no food at all or having only staved their hunger in the morning with a crust of dry bread. In sharp, frosty weather it is a common experience for teachers in the elementary schools of the poorer parts of our great towns—I have often seen it—to find children suddenly seized with vomiting. This is not so much caused by the fact that the stomach is upset as that it has revolted against the effect of the cold upon its empty condition. And not only is this state of things true of the poorer parts of the big towns. It is also true of many of the agricultural villages. Let a visitor to a village elementary school look closely at the children. They are in many cases flabby and pale. They need more nourishing food. A breakfast of "teakettle broth," a bit of bread and treacle and some abominably poor tea—these form the three meals daily.—Dr. T. J. McNamara, M. P., in Nineteenth Century.

Athletes and Consumption.

There must be no exercise as exercise for the consumptive patient. If you are able and feel like it, amuse yourself, but don't take exercise to build your system up. I know, I, too, have heard those stories about men given up to die who began work in a gymnasium and by violent exercise entirely recovered their health. When the lung tissue is attacked by tuberculosis it heals, if it heals at all, by fibrous scar material filling in the cavity. No new lung tissue is formed to replace what has been lost, and this scar material is useless for breathing. Suppose you had a deep cut in your hand and you kept working that hand violently, how long do you think it would take the cut to heal? When exercise is taken or you "expand the lungs" you have to work the lung tissue just as you work your hand, and if it is wounded there will be a much larger proportion of scar material useless for breathing when it does get well.—Everybody's Magazine.

The French Archives.

The archives so magnificently housed in the Hotel de Rohan form one of the most interesting sights of Paris. Here, bound in white calf, thousands of folios contain the history of France, dating from the Capet and Valois kings, all documents being classified under four heads—administrative, historic, legislative and judicial. Among minor objects of interest not shown to visitors without special permission is the table on which Robespierre, wounded, was placed in the Hotel de Ville on the eve of Thermidor and the inventory of Marie Antoinette's wardrobe, with patterns of her dresses, and also of Mme. Elizabeth's. Insignificant indeed would the collection appear beside that of a fashionable lady of today. In these historic premises, busy as bees, indefatigable searchers are continually at work.—Westminster Gazette.

Baltimore, Ireland.

Baltimore, in Maryland, gets its name from a small and unostentatious fishing village in Ireland. The word Baltimore signifies the "village that grew up about the big house," and the derivation is plain when one sees the ivy covered ruins of the very remarkable big house that was once the stronghold of the O'Driscolls. It is situated upon an imposing height, a sentinel over the numerous little dwellings that have sprung up and increased in the vicinity of its wrecked and deserted life. From the village of Baltimore enormous catches of mackerel are sent to America.—Exchange.

Read His Own Banns.

A distinguished English churchman tells this in M. A. P.: "The vicar of Swanscombe was a very eccentric man. I remember—indeed, who could ever forget it?—that he once read out his own banns of marriage with a lady who had not only not consented to marry him, but whom he had never asked to do so. He did this for two Sundays. On the third her father rose and formally objected to such a ridiculous proceeding."

Waiting His Turn.

"Well, Jack," said his chum after Jack had proposed to the most popular girl in the town, "is it all right?" "Well," said Jack ruefully, "I can hope—that's all." "What did she say?" "She said she'd file my proposal with all the others and consider it when she got down to it."

Romance of a Statue.

The statue of Charles I. which now stands in London was sold to a brazier during the Commonwealth with the understanding that it should be broken up. The buyer, however, saw a chance to make money and buried it instead. To cover his action he made a large number of bronze knives and forks, which were eagerly bought by both royalists and Puritans as souvenirs. When the monarchy was restored to power the statue was dug up again and bought by the government to be placed in its present position, where it has remained since 1674.

To Ambitious Young People

If you are of an independent and money-earning turn of mind you will be interested in the following: One year's training in the Woodbury Business College costs \$100; six months, \$55. The education thus acquired will enable you to earn from \$50 to \$100 a month. Taking an average of \$60 a month, or \$720 a year, in three years you will be \$2,160 ahead of your companion who has spent his four years in high school.

The Woodbury gives two main courses of study:

1 Bookkeeping and Business Course. 2 Shorthand and Typewriting Course

Either course will fit you for a good position. The two will fit you for a better one. It takes about six months to complete one course from nine months to a year to complete both.

This school has unequalled prestige and success in placing graduates. We shall be pleased to have you call at the college to see us. It is our business to help young people to be successful. Illustrated catalogue on request.

Product of the Peat Land

In a recent issue the Riverside Press has a write-up of vegetable interests in this section, from which the following reference to one of our leading local industries is reproduced:

In no section of the world are there any celery fields so extensive as those in the vicinity of Smeltzer. In 1888 D. E. Smeltzer, a commission man of Kansas City, came to Los Angeles and prospected for land suitable for celery growing. The peat lands around the present town of Smeltzer looked good, and the first seed were planted in 1889. That year less than half a car was harvested. This summer the celery association of Orange county had under cultivation 3100 acres in celery alone, making the largest acreage of celery in any one section of the world. In France there are large beds of celery, but a 200 acre farm of celery there is considered a big thing.

The golden west celery and produce company is the largest single celery grower in the world. The ranch is owned by members of the company, who are E. A. Curtis and W. F. Crone-miller of Los Angeles, H. S. Hazeltine of Smeltzer and C. H. Kuehne of Kansas City. Mr. Smeltzer died four years ago and his interests were purchased by the surviving members of the company.

Celery made Kalamazoo, Mich., famous, but that city is not now on the map when it comes to celery. Californians never do anything by halves, and the celery fields are no exception. The celery industry is of so much importance that the California vegetable union was necessary to market it.

There is no vegetable or fruit proposition so completely controlled by the growers and handled to such advantage in the state as is the celery deal of Orange county. There are 166 members of the celery growers association of Orange county. When it becomes necessary to plow under a given number of acres because of unprofitable markets, a committee is selected to designate which shall be destroyed, and the owners of this are paid out of the funds of the association pro rata what the price was for the month's pool.
