

MUNICIPAL OWNERSHIP OR EDISON

City Trustees Discuss Propriety of
Leasing Electric Light Plant—
New Sidewalks—Bees

The city trustees at their meeting on Tuesday evening discussed informally with Mr. Gessler of the Edison electric light company the propriety of leasing the municipal electric light plant to his company for a term of years.

Mr. Gessler said his company could operate the plant cheaper than the municipality and as a consequence cheaper light to consumers would result. He offered to pay the city 12 1/2 per cent of the gross receipts of the lighting service, and agreed to give the city the right to terminate the agreement in a year. In that event, however, his company would demand \$500 for their work. He added that his company was not desirous of leasing the plant with a view to relinquishing control of the works in a year, but desired to make the agreement permanent, and to that end would guarantee the best service. His company would render monthly statements. He was now furnishing power to Riverside and Colton for operation of their city plants, and his company was furnishing power to a large number of pumping plants in this vicinity. He said his proposition was a money saver to the city, and if the trustees viewed his offer with favor he would make a written statement of his purposes at a future meeting.

Trustees Darling, Rust and Fletcher favored the move as being an economical venture, while Schwenckert and Berdrow opposed it.

Schwenckert said he favored staying by the municipal plant. The service was good, better, he said, than that of the Edison company at Orange or Santa Ana.

The plant pays, and if the Edison people could operate it at a profit he could see no reason why the city could not do so also. He would not vote in favor of the change without an affirmative vote of the people.

Clerk Merritt read from his annual report showing the successful operation of the city's plant, the net increase of receipts over expenditures being \$654 for the past year.

After discussion Mr. Gessler was instructed to bring in his proposition in writing, when it will be further discussed.

Marshal Steadman reported the following collections for May: Water \$309 50, licenses \$473 50, lights \$460 55, total \$1243 55. Delinquents collected: Water \$39 65, lights \$29 35, total \$69. Delinquents reported: Water \$34, license \$1 25, lights \$21 25, total \$56 50.

Treasurer Hartung reported the following funds on hand: General fund \$920 42, improvement fund No. 1 \$907 50, No. 2 \$157 50, No. 3 \$148 50, library \$245 92, total \$2379 84.

Recorder Howard reported three cases in his court; fines collected \$20.

Superintendent of Streets reported sidewalk on Adella street completed, weeds cleaned from streets, water connections made for new residences of O. Renner and J. Helmsen, and a quantity of hay purchased from Tousseau Bros. at \$14 per ton.

Fletcher of the finance committee reported approval of bills amounting to \$1759 93.

On motion of Darling the city clerk was instructed to notify the gas company to make application for franchise covering operations outside limits of former franchise.

The city clerk was also instructed on motion of Darling, to notify the Sunset telephone company to repair cement sidewalks where incisions had been made for their new poles, and to provide anchor posts for guy wires.

Darling said he desired the passage of an ordinance declaring the keeping of bees a nuisance within the municipality. It was discovered that such an ordinance was already in existence. The marshal was ordered to enforce it.

On motion of Schwenckert, the ordinance committee was instructed to prepare an ordinance placing the license of itinerant medicine vendors at \$10 per day.

Surveyor Steward submitted maps of surveys for new sidewalks on various city streets. He was given instruct-

ions as to curb line and other details, and was instructed to proceed with his work.

Application of C. F. Grim for city water in Del Campo tract. On motion of Schumacher, seconded by Fletcher, Mr. Grim was granted permission to lay pipe at his own cost, he to take the same out in water.

W. C. Warner was granted permission to move a small frame building in rear of his barn to another location.

Darling suggested the teamsters' salaries should be raised from \$45 to \$50. Schwenckert said these salaries had been recently reduced from \$50 to \$45 on the ground of economy, and he opposed the raise. No action was taken.

Fritz Yungbluth here presented the board with a box of Havana cigars. Everybody smoked.

Application of J. D. Helthausen for transfer of F. Ruhman's saloon license. Granted.

Application of V. Bentz for wholesale saloon license in the Denne building. Granted. Schwenckert voting no.

Application of Ganahl lumber company for closing of alley in Santa Fe tract. Passed to print.

Resignation of Dr. Bickford as health officer. Accepted, and a vote of thanks extended for efficient services.

Eighth Grade

Following are the members of the eighth grade of the grammar school, thirteen girls and ten boys, many of whom will graduate at the close of the school year next week:

Maria Arias, Gertrude Asber, Clementine Backs, Lillian Benperscheidt, Cora Bowen, Ethel Gentry, Freda Gree, Pansy Pellegrin, Grace Schindler, Viola Summli, Mary Wisser, Mabel Wommer, Lily Zeus, Arnold Dieck, Ling Fat, Elton Goble, Rollo McCellan, Raymond Nebeling, Harry Pegel, Willie Rodger, Max Schumacher, Herman Wedel, Fred Weisel.

Final examinations will begin on Tuesday and continue three days.

Schools close on Friday, the 23rd, for the summer vacation. The high school closes a week later.

Money in Celery

Celery growers look forward to the most successful year in the history of the industry. Last year a total of about 3000 acres was harvested, and this year the area will be greatly increased. According to the annual report of the secretary of the Celery Growers' Association, a total of 2,064,670 dozen bunches of celery was sent out for the season just closed. For this the growers received in cash \$331,862 11. Packing-house expenses for handling the crop amounted to \$2390.98, a remarkably low rate. These figures apply only to the crop handled through the association, and do not include independent shipments. The association last year controlled the major portion of the trade, and has been so satisfactory in its dealings with growers that this year it bids fair to have the handling of the entire output of the peatlands. Preparations are being made to care for about 2500 carloads the coming season.

C. H. Taylor of Westminster returned home a few days ago from a two weeks' trip in the Santiago canyon to find that his house had been ransacked and denuded of much of its furnishings. Lace curtains, furniture, a new Singer sewing machine and other articles were taken. Investigation showed that the machine had been offered for sale at a store in Santa Ana several days ago by an unknown youth, who left it while, he said, he went to get a bill of sale, but never returned. Taylor is unable to give any clue as to who might have ransacked his home, but from the description of the person who offered the machine for sale, suspicion points to a young man who recently left for Oregon.

The corner stone of the new Odd Fellows Hall will be laid on Sunday, June 25th, with appropriate exercises. Grand Master Phelps is expected here from Riverside to preside at the ceremonies. The corner stone will be laid at 10 o'clock, and the afternoon will be devoted to a literary and musical program at the opera house.

Children's Day exercises will be held at the Methodist church on Sunday evening. Special program by the choir. A cordial invitation is extended to all to attend.

The National Game

The Oil Wells played in their old form on Sunday and easily defeated the Hoegge Flags by a score of 9 to 4. The game was a snappy contest throughout and the patrons surely got a run for their money. Johnson was in the box for the Oils and was given good support. Gamble pitched for the visitors and the locals hung it onto him in true Togo style. The Flags blanked the first three innings, while the Oil string of figures read 1, 3, 1—making five. It looked like easy money for them, but Goodman's long drive in the fourth sent in the two men who preceded him, he scoring later, netting three. The Oils blanked the fourth's last half, but having a comfortable lead they cared not for a little thing like that. The Flags in the fifth went down in a rush, while the Oils kept rubbing it in, Lewis sending home two men on a peach of a double, and the green grass grew all around. They were in clover. In the sixth the Hoegges mustered up courage and scored again, and so did the Oils. But that was all for the visitors. The Oils blanked in the seventh and topped the game off with one in the eighth. They did not play the last half of the ninth.

Sacrifice hits—Mease, Burke. Umpire—A. E. Peris. Scorer—W. J. Woodruff.

NOTES

The game was probably one of the best ever, and the collectors received commendable treatment on their walks around; perhaps the hat checks did the trick.

Arthur Perris umpired an impartial game, something we have not been witnessing here of late.

Johnson pitched his usual fine game, allowing the Hoegges only five hits, two of which were classed as lucky.

Mease carried off the honors at second, accepting several hard chances in his usual easy fashion, also hitting the ball when his meant runs.

All the oil boys are becoming acclimated in their new territory and put up good ball. And say, Andy, the grounds need fixin' awfully bad.

Manager Young's white hat of the vintage of '05 may have had something to do with lifting the hoodoo; but Tom says there are no ponies of that color running. So keep quiet, boys.

The Oil Well rooters are a savage bunch even off the reservation and had the Flagettes on Unesay street many times with their luminous lung power.

Joe Burke adorned the right garden after an absence from us for quite a while and gathered in a couple of high ones. Joe is still "bitching."

Kid Johnson is going to have a try-out in the box with a Los Angeles team at Chutes Park this week. Crips will catch for him.

The Young Americas and the Olive team will play on the local grounds next Sunday. The Oil Wells and Tufts-Lyons a week after.

New Officers and Directors

The Savings, Loan and Building association at its meeting on Monday evening elected the following board of directors to serve for the ensuing year: N. F. Steadman, R. Melrose, H. A. Dickel, F. A. Backs Sr., Joe Backs Sr., August Backs, John Schumacher, C. F. Grim, J. F. Ahlborn, Frank Baum and Fred Backs Jr.

The following officers were elected: N. F. Steadman president, J. F. Ahlborn vice president, Fred Backs Jr. secretary, H. A. Dickel treasurer, R. Melrose attorney.

Fritz Ruhman and wife contemplate a trip next month to the Portland fair.

Buena Park

Mrs. Roller was viciously attacked by an enraged heifer at her home in Centralia on Saturday, when she suffered the fracture of the bones in her left ankle and received internal injuries by being trampled by the brute. Mrs. Roller had just finished with the milking and had passed by the tethered heifer on her way to the house when the animal suddenly charged upon her striking her in the back, knocking her down, and then trampling the prostrate form, with the result stated. The unfortunate lady was rescued from the animal's attack and carried into the house and medical assistance summoned. Mrs. Roller being aged it is feared her injuries will confine her to her bed for several months.

County Surveyor Finley was here on Monday and surveyed the new county road. The signatures have been received from all but two of the property owners, granting right of way for the new highway. It is not yet known whether the property of the two non-signers will have to be condemned or not.

Mr. Darling has just finished cutting his first crop of alfalfa. He cut 75 tons off from 50 acres, for which he finds a ready sale. He has commenced heading 100 acres of grain.

McKaughan, the village blacksmith, owing to the rush of business has put Mr. Reno in the horseshoeing department. Mac has just finished a breaking cart and is now able to subdue the wild-eyed bronco.

Mr. Williams has moved into the new residence built by Mr. Champion. Chas. S. Kennedy, the live and bustling life insurance agent, is doing a rushing business in his new venture, and may have to invest in an auto to further facilitate his progress.

Guy Russell has resigned his position at Whitaker Bros. George Whitaker of Los Angeles is temporarily filling the place.

Two carloads of condensed milk were shipped on Monday.

Val Brown and Mr. Ryman returned some days ago from Kern river where they have something in placer mining. They have taken up a claim on shares and will return in August to work the claim. The product goes about \$80 to the ton, with better prospects ahead.

Graduating exercises were held at the schoolhouse Saturday evening, Arthur Smith and Leslie Guthrie being the graduates. Dialogues and recitations were rendered. A reception was tendered the teachers on Monday evening.

Complaint is made concerning the way the Centralia and Orangethorpe roads have been attended to. The roads have recently been plowed up and are now in bad condition, not having been oiled. The highways formerly were in fair condition, a few chuckholes here and there needing repair. But since their last plowing it is said they're a fright. Fix the roads, Mr. Roadmaster.

While Mr. and Mrs. James A. Whitaker were driving from Pasadena to their home in Los Angeles, a runaway collided with their vehicle, throwing both out, but luckily with no serious consequences. The accident happened several days ago and is the second mishap of the kind to befall the aged couple within a year.

San Gabriel Forestry

Washington, June 9.—A planting plan for certain important watersheds and reservoirs for the treatment of lands in the interior of the San Gabriel forest reserve, California, have just been completed by A. T. Scarle, of the Bureau of Forestry. This report considers the possibilities of planting on various types of denuded and chaparral-covered land in these mountains, and embodies recommendations as to species which should be used and methods of planting, and locates the slopes which are in most urgent need of attention.

The chaparral growth has been divided into five well-defined types which require special treatment. The most hardy species, such as the knob cone, Monterey and digger pine will be planted in more unfavorable situations, while the more valuable, but less hardy trees, such as yellow, sugar and Coulter pine and spruce and cedar will be planted on more favorable sites.

The Postal telegraph company yesterday moved its office to the postoffice. Deputy Postmaster Scott will have charge of the operating department.

"The Taming of the Shrew"

One of the most powerful comedy melodramas in five acts will be given by the Senior Class of the Anaheim High School, June 28th, at Reiser's Opera-house. Elaborate and expensive costumes, which were made to order especially for the occasion, will be shown throughout the play. This is the first time the Taming of the Shrew, one of Shakespeare's high comedies, will be produced by a graduating class in Orange county schools and it is to be hoped that the citizens of Anaheim will attend in great numbers and appreciate the efforts of the students, who promise us such a creditable performance.

Mr. Holmes, the trainer of the Cumnock school of Los Angeles, has taken great pains in his endeavors to make the play a success. The cast of characters is as follows:

Petruchio, the hero.....Leslie Swope
Katharina, the shrew.....Kia Christian
Lucentio, suitor of Bianca, David W. Christian
Bianco, sister of the shrew.....Elsie Clabaugh
Balthasar, father of the shrew.....Herman Christensen
Horatio, suitor of Bianca.....James Nelson
Gremio, suitor of Bianca.....Leonard Evans
Vincentio, father of Lucentio.....Ernest Clabaugh
The Widow.....Elsie Nebeling
The Tailor.....Percy Bradford
Curio, servant of Katharina.....Clara Fischer
Grumio, servant of Petruchio.....Harry Barter
Blondella, servant.....Ernest Clabaugh
Tranio, servant of Lucentio.....Walter Noble
Nathaniel, servant.....Edward Merritt
Sugarcoat, servant.....Harold Pellegrin
Minor characters.....Dora Clark, Mary Rodgers

A social hop will be given after the play. Music will be furnished by Babbie's orchestra. General admission 35c; reserved seats at McCollum's 50c.

All are cordially invited to attend this rare treat.

Baccalaureate service will be held at the Christian church Sunday evening, June 25, in honor of the senior class of the Anaheim high school. Rev. Johnson will address the graduates. Music will be rendered by home talent. All are welcome.

Mr. Kling Rises to Remark

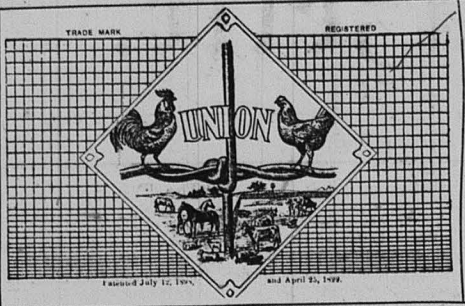

EDITOR GAZETTE.—In your last issue I observed an article which clearly and beyond doubt was intended for my benefit. It was very nicely gotten up and a very fine joke, if so intended. I assure you I appreciated it as such. Whereas I have never been intimately acquainted with the editor of the Gazette, I have known him well in person and reputation for the past fifteen years or more, and I must say that I never heard of him making any very serious blunders. The only exception I take to the joke is that many people might and are liable to misconstrue the meaning thereof and in such case would set matters forth in a wrong light. Therefore I beg space in your columns to make the following statements:

It will be twenty years next November that I have lived in Orange county. I have been busily engaged in the meat business all of this time. During this time I have had dealings with a great many people in the way of selling meat and buying stock. It would not doubt surprise many of my old friends and acquaintances to learn that I was making a living by conducting what is termed a "blind pig." I have a fine meat business and never in my life have I kept intoxicants for sale or for any other purpose but my own use. I am not a prohibitionist. I think prohibition is a farce of the rankest kind and always have thought so. I am strictly opposed to drunkenness, and would advise any one that the less he drinks the better he is off. If in the past twenty years dealings in Orange county I have given cause to any one to have a grievance, I am more than willing to right it at once. If I owe anyone any money or anything else, let him present his claim and it will be adjusted at once. My fundamental principle is, "Do right." When I err in this I always thank anyone for calling my attention to the shortcoming. If anyone can prove contrary to any of my assertions herein, I will cheerfully make him a present of fifty dollars. Your respectfully, THEO. KLING.

Santa Ana, June 12.

Supervisor Linebarger has completed oiling 3 1/2 miles of Orangethorpe avenue. He expects to oil two more miles on the west end of this avenue next month. Placentia avenue, from Wm. Crowther's to J. N. Nengo's, was given a coat of oil this week.

Indications are for a resumption of the extensive mining operations carried on in Silverado canyon, twenty-five miles east of this city, twenty-five years ago. The Bourland mine and milling company, organized recently by Los Angeles and Bakersfield men, is meeting with success in working the old Blue Light mine. This mine is owned by Mr. McMurphy of Los Angeles and was worked thirty years ago with varying success.

WHAT IS SUGAR-BEET PULP?

Extracts from Report of Charles F. Saylor, Special Agent of the United States Government

Continued from Last Week.

A second feeding experiment on the farm of the Hon. A. M. Todd of Western Michigan, who had a large number of steers in poor condition. They were divided into two lots, as nearly equal as possible. The first lot received a poor quality of mixed hay, and in addition, wheat bran, oats and cornmeal. The second lot received the same ration, and, in addition, beet pulp. The results of the experiment were as follows: The first lot, receiving no pulp, made a daily gain of 1.84 pounds. The second lot, to which pulp was fed, made a daily gain of 2.25 pounds. In order to establish a ratio of comparative values between pulp and the other items of food which entered into the ration used, I will give below the results as determined by Director Smith:

Making the computations as before to find the estimated value of a ton of pulp, we find that under existing conditions at Pearl (Todd's farm), a ton of pulp took the place of 244 pounds of mixed hay, 326 pounds of wheat bran, 296 pounds of cornmeal and 27.2 pounds of oats.

A third experiment was conducted also on the farm of Mr. Todd, in which two lots of steers were fed the same kind and amount of dry feed for six weeks. To the ration of the one lot pulp was added. The feeding of 13,375 pounds of pulp gave an aggregate increased gain to the steers so fed of 280 pounds. Counting the beef worth 5 cents per pound, it gave the pulp the value of \$2.03 per ton.

It was demonstrated that sugar beets and sugar-beet pulp were equally valuable for feeding pigs. Pulp may be very profitably fed to growing pigs in connection with a grain ration. Pulp served the same purpose in the hog ration as did sugar beets, and at less expense. Sugar beets were not as valuable as pulp for lambs.

The experiment station at Cornell, New York, conducted an experiment in order to ascertain the nutritive value of the dry matter in pulp in comparison with the dry matter in corn silage. It was found that they equal.

In pursuance of the claims made for pulp as a food for animals, I will introduce an estimate of the pulp product of the United States and the number of animals which might be fed thereon. In this estimate California would produce 928,400 tons of beets or 464,200 pounds of pulp. This pulp would feed 50,223 milch cows, or 100,466 steers or 1,000,000 sheep.

The United States would produce 3,281,040 tons of beets, or 1,640,520 tons of pulp. This would feed 179,798 milch cows, or 359,596 steers or 3,395,960 sheep.

The Michigan Experiment Station demonstrated that a ton of pulp would produce 41 pounds of beef, live weight. At this rate the total annual pulp product of the United States would produce 67,261,320 pounds of beef, worth at five cents per pound, \$3,363,066. Not over ten per cent of this utility is realized at present.

If as demonstrated in the Michigan experiment cited, the addition of pulp to the ration produced \$2.03 worth of beef for every ton of pulp fed, the feeding of pulp costing \$1.50 will yield a profit of 33½ per cent.

I do not think it useful to attempt to give the value of pulp as compared with other food stuffs. This question is often asked in regard to oil-cake for instance, and it is not possible to answer it. At the present time it is the general belief that the principal value of pulp will be found in aiding digestion and maintaining sound health of animals. It has also unquestionably a food value. I do not make any attempt, however, to estimate the value of pulp in units, as compared with units of some other kind of food. I think no rule for the feeding of pulp

is necessary. I do not think it is important whether a greater or less amount is fed in proportion to rough forage and grain fed with it. My idea would be, when on a full feed, to give less than a full grain ration, in order to be certain of securing some economy in the use of pulp. I should, therefore, feed cattle, for instance, anywhere from 40 to 60 pounds of pulp and let them have all the rough forage they wished.

It must be borne in mind that my ultimate object in this discussion is to show the farmers of this country the benefits that may be secured by using sugar-beet pulp as food for stock. This effort will be well repaid if it attracts the attention of a few farmers to the fact that here is a useful article of food. For some time to come this valuable food product can be secured far below its actual value, measured by any scale of prices that yet obtains in this country.

In feeding stock a farmer may have in view several things, as follows: 1. It is the scientist's province to study the changes in animal tissues and to inform the farmer as to the correct proportions of the different compounds of food required in building up the tissues. This food must be furnished to the animal in the proportion with which these various tissues are torn down, or in accordance with the purposes of the farmer in building up the various parts. This is called a balanced food ration. 2. In case of feeding animals for the meat market, it is the purpose to fatten and build up a carcass of meat filling the requirements of commerce. 3. It may be the purpose of the farmer simply to keep an animal in good healthful condition, without attempting to produce meat or dairy products. 4. It may be the purpose to give the animal a strong, healthful constitution and strong muscular tissue for performing work, as is accomplished with draft animals and other beasts of burden. 5. It may be the purpose to feed for the milk product. 6. It may be the purpose to feed for the best results in breeding.

Fortunate indeed is the farmer who is situated where he can secure sugar-beet pulp. For fattening we have been too much inclined to condensed ration, largely made up of cereals, hay, and water, too dry and too compact, requiring too much of the digestive organs. Sugar-beet pulp enters readily into any balanced ration designed for specific purposes. No single item makes a food ration. This statement is as true of corn as it is of pulp.

Probably in no other country in the world has the feeding of beet-pulp been studied and tested more extensively, or scientifically than in Germany. The rations as reported by the Consul are as follows:

To produce 22 pounds of milk daily, per 2200 pounds of live weight per day—Fresh pulp, 99; hay, 44; peanut cake, 5.5; palm-seed cake, 11. Food requirements per 2200 pounds of live weight per day—Fresh pulp, 110 pounds; hay, 40; moist beer grains, 44; bruised grain, 7; peanut cake, 2.

The farmer is naturally of a practical turn of mind. When anything new is recommended he naturally asks what is its determined monetary value. All through this article of pulp feeding, I have aimed to show that there are values to fresh pulp that are undetermined. But I fully understand that the money value is the easiest understood. I will briefly state what I have shown with reference to the actual money value of pulp.

1. The Colorado experiment station concluded after exhaustive experiments, that for certain purposes, pulp costing \$1.50 per ton could be fed at a profit.

2. The Michigan experiment station concluded that a ton of pulp

produced 41 pounds, live weight, of beef. This at five cents, ordinary price, gave the pulp, without profit, a feeding value of \$2.05 per ton.

It is now pretty well known in this vicinity that there is another sugar factory by-product that also contains valuable food constituents, and which being in a more concentrated form than beet-pulp, it is especially adapted to be fed in connection therewith. This is molasses, said by experts to be equal in feeding value to corn, pound for pound.

Last season, at Los Alamitos Sugar Factory yards, a most conclusive test was given in feeding it with pulp on a large scale. The Gazette of October 24, 1904, had the following on the subject:

"The Birby Land Company is now disposing of some first class stock, fed on pulp and molasses. H. A. Hammond, foreman in charge of the herd, states in regard to the use of molasses for fattening purposes:

"I have now fed four times full, a four-barrel tank of molasses in the following manner: I first picked out of the whole herd twenty-eight head of poor, scrubby cattle. They had been here a month, feeding on pulp and hay, with very little grain. They have now been six weeks on molasses, fed morning and night on uncut baled hay with fresh pulp. For the first two weeks I fed them lightly, gradually increasing, until at the present time the ration is seventy quarts of molasses added morning and night to their rations of pulp and hay. I now consider they are very nearly up to the rest of the herd, which have had during the same time only hay and pulp, but were in much better condition to start with. As a matter of fact, the cattle love it, and I know of nothing that will so quickly put on flesh and fit cattle for market as such a ration. It seems to be just what they need to put them into condition, and being assimilated so readily, it produces flesh very rapidly. The molasses takes the place of the sweetness which is found in sorghum, while the hay furnishes the fibre, so that practically we have a sorghum fodder, than which nothing is better for stock. I have now made another selection of twenty head of scrubby ones from the herd, which it is my intention to feed in the same way, as the most economical method of putting flesh on their bones. Feed syrup, by all means, if you want to get rid of them quick."

HEALTH
is the
Most
Important

The manufacturers of Royal Baking Powder have had 40 years of scientific experience.

Every method of bread-and-cake raising has been exhaustively studied in this country and abroad.

The result is a perfect product in Royal Baking Powder. There is no substitute for it. The purity and efficiency of Royal Baking Powder have been commended by the highest authorities of the world.

These facts mean two important things to all housekeepers:

First: that Royal Baking Powder is healthful and makes wholesome food.

Second: that Royal Baking Powder makes food good to taste.

Studying Desert Plants

[By Rene Bach]

The latest scientific institution is a desert laboratory, so called, which has been established by the Carnegie Institution about two miles from Tucson, Arizona, on the site of the ruins of an old hill-fort, held for many years by the Papago Indians against the marauding Apaches. It is in the midst of a region, the aspect of which is rendered spectacularly weird by an extraordinary luxuriance of the cacti, which makes up most of the vegetation, many of the plants being of gigantic size. The locality, indeed, was chosen for this very reason, in order that there might be an opportunity to study such forms of plant-life. The principal work of the laboratory will be to observe the structural and other expedients by which the plants of the desert are enabled to get along with almost no water; and the knowledge thus obtained will be utilized eventually by applying it, so far as may be practicable, in the raising of ordinary crops in the great dry belt. In a word, the object in view is to discover means of economizing water in places where it is scarce.

There is something rather picturesque in the notion of setting up a botanical workshop in the midst of such a desert as that in the neighborhood of Tucson. But there are some lessons to be learned there by the scientific observer which he could not acquire elsewhere. Scattered all over the arid waste are plants which, each after its own fashion, have solved the difficult problem of water supply by building reservoirs of their own, gathering the precious fluid in ways often highly ingenious, and preventing its evaporation by methods most curious and interesting.

For instance, there is the "water-barrel plant," somewhat resembling a beer-keg in size and shape, the whole interior of which consists of storage-cells for holding water. So admirably is its structure adapted to the purpose in view that, as recently ascertained by the investigators, over ninety-six per cent of the pulp which fills the vegetable receptacle is pure water. In fact, it is actually nothing less than a tank of water, which is of so excellent a quality that the Indians of the des-

ert rely upon it almost wholly during periods of drought.

"A stranger left alone in such a region would die of thirst," says Dr. F. C. Coville, one of the experts in charge of the desert laboratory. "Yet there is water in all deserts, and the native animals and native human beings know how to find it." He states that the method adopted for tapping the "water-barrel" is to cut off the top with one blow of a machete, thus exposing to view the mass of white pulp that fills the interior, and to mash the latter with the end of a stick. In this way a bowl-shaped cavity is formed, which quickly fills with water. The Indians, who worship the plant as a gift of the rain-god, use the water for mixing bread as well as for drinking.

There is no desert so barren as to be without water-storing plants. The explorer, Campbell, journeying across the plains of Central Africa—where as far as the eye could reach there was nothing but sand, billowing like the sea—found luxuriant creepers which were covered with large berries, each of them containing about three teaspoonsful of palatable water. On looking more closely he was surprised to observe a number of mice (the only inhabitants, seemingly, of that inhospitable

CATARRH

ELY'S CREAM BALM
This Remedy is a Specific,
Sure to Give Satisfaction.
GIVES RELIEF AT ONCE.
It cleanses, soothes, heals, and protects the diseased membrane. It cures Catarrh and drives away a Cold in the Head quickly. Restores the Senses of Taste and Smell. Easy to use. Contains no injurious drugs. Applied into the nostrils and absorbed. Large Size, 50 cents at Druggists or by mail; Trial Size, 10 cents by mail.
ELY BROTHERS, 23 Warren St., New York.

spot), which were busily engaged in nibbling the berries and carrying them to their burrows, as seamen would convey casks of water to their ships. Unfortunately, many of the water-storing plants thus situated introduce into the fluid chemical ingredients which render it unpleasant to the taste and even nauseating. This is true of the "peyote" (found plentifully in the neighborhood of the desert laboratory), which, while in appearance plump and juicy as an apple, secretes a bitter and poisonous juice. The expedient is obviously designed as a means of protection against animals, which otherwise would be likely to eat the water-containing vegetable. In the case of the "water-barrel," however, an adequate defense is furnished by a formidable array of thorns and hooked spines covering the exterior, so that the plant does not find it necessary to offer further discouragement to predators.

Now, one of the most curious facts ascertained by the scientists in connection with this study is that many of the desert animals never drink. This seems to be true of various species of rodents, such as the "jumping mouse" and "pocket mouse," which, when kept in captivity, not only take no water, but appear actually to regard it with repugnance when offered to them. Dr. J. A. Allen, of the American Museum of Natural History, kept a pocket mouse for three years without water, its food being exclusively dried birdseed. Inasmuch as a supply of moisture is absolutely necessary to animal life, the only plausible solution of the problem thus far suggested is that these creatures are able by some mysterious means to decompose starch, resolving that substance into the water and carbonic acid which constitute it.

In the neighborhood of the desert laboratory are numerous specimens of the "giant cactus"—a species which attains a height of forty feet.

The Brownsberger HOME SCHOOL

Incorporated

953 W. 7TH ST. LOS ANGELES, CAL.

Rush courses in Bookkeeping, Shorthand and Typewriting for three months during the summer in BROWNSBERGER BUSINESS COLLEGE

Special work in Brownsberger Preparatory, preparing pupils to enter Brownsberger Business College or to make up their grades, or to return to the Public or High school. Pupils received from sixth to tenth grades.

The Preparatory Department is conducted in separate building and is an established part of the school, where pupils may receive a thorough education in one half the time required in public and high schools.

Send for new circular, "Plain Talks on Special Features of Brownsberger."

F. BROWNSBERGER, Pres.

Its brilliant, red, pear-shaped fruits contain a scarlet pulp with a flavor like strawberry jam, and in early autumn, when they are ripe, the Indians gather them, pressing the juice out of them into large earthenware pots. The juice, when fermented, is very intoxicating. It is called "tizwin," and to its demoralizing influence has been attributed many a fierce outbreak of the savage Apaches.

Many plants of the desert actually refuse to be cultivated. They will grow only under conditions hostile to ordinary vegetable life, with no water to speak of. Nevertheless, there are some which will eventually become domesticated and of important use to mankind. One of these is the "canaigre," which is probably destined to become of great economic value at a future day. Related to the common dockweed, its beet-like root contains thirty per cent of tannic acid. The Indians have employed it from time immemorial for tanning leather, and inasmuch as the world's supply of tannin-producing materials, such as oak-bark, is running short, it may yet be utilized on an extensive scale to make good the deficiency.

For the present the desert laboratory will devote its attention exclusively to a scientific study of desert plants, and particularly of those which are most noteworthy as storers of water. It will not attempt to develop the economic usefulness of any of the species, though eventually some of them will doubtless be introduced into cultivation. There are among the cacti not a few that are so valuable that it seems a shame not to utilize them. The sum and substance of the whole discussion lies in the fact that the desert is a source not only of many plants of more than possible economic value, but also of hints which may prove extremely useful in the raising of ordinary crops—particularly in regions where the water supply is deficient. Such hints will be gathered and utilized by the desert laboratory near Tucson, which will put the results of its observations into easily-assimilated shape for the benefit of the farmers.

Items of the Irrigation Country

While the present irrigation fund of \$25,000,000 would not go very far, distributed throughout the 16 great western states and territories, in two, three, or four million dollar amounts, it is being made to carry forward a quite uniform and comprehensive irrigation development, by making the irrigation works pay for themselves.

In other words, it is not the program of the Reclamation Service to build large projects complete immediately, but to finish a small but independent portion of each project so that the water rights of the lands thus irrigated may be sold to the settlers and thus immediately furnish money with which to carry the work still farther. The government is in each case starting the works, and allowing the project itself and the settlers to provide for its completion. And as in all the government projects the lands are being eagerly taken up by settlers, there is no question of the success and completion of the works, of however great magnitude.

EASTERN BUSINESS MEN INTERESTED
That the eastern part of the

United States is not indifferent to the national benefit of irrigation and the development of the west is shown by the intelligent resolutions passed at the recent annual meeting of the National Association of Manufacturers held at Atlanta, Ga., on May 21.

Recognizing that the reclamation of western desert acres will furnish the finest market possible for eastern manufacturers, the resolutions commended the administration of Secretary Hitchcock of the Interior Department who is charged with the administration of the irrigation law, endorsed Director Walcott and Chief Engineer Newell of the Reclamation Service and pledged to them the support of some 3300 of the largest manufacturers in the United States in their continued efforts to carry out the national irrigation act for the creation of the largest possible number of prosperous American homes.

The resolutions further set forth that the profound importance of the social and philanthropic features of the irrigation movement and the subdivision of large land tracts into small homes should be impressed upon the American people to the end that rural homes should become a nation of rural homes rather than one of large cities.

The resolutions call attention to the great public importance of the national frauds, the weakness of our present land laws and strongly support the recommendation of President Roosevelt's Public Land Commission for a thorough reform in our land laws to the end that the public lands be held strictly for real settlers and against speculators.

DRY LAND RECLAMATION

Colorado, Wyoming and Montana are apparently waking up to the fact that several million acres of land in those states which have been for years grazed upon by cattle and sheep and considered worthless for agriculture in any form, can be made to grow very profitable crops of grains, forage, and in some cases even vegetables and fruit. The rainfall in these regions is comparatively slight, but it happens to come at just the growing season of the crops and the soil is so wonderfully retentive of moisture, as well as productive, that from 15 to 30 bushels of wheat per acre and other crops in proportion, can be raised on as little as 12 or 16 inches of rainfall, which in eastern states would not suffice to half-way mature a crop. The "dry farm" experts state that there are at least a hundred million acres of land distributed throughout the western states, in some places in very considerable tracts and in other sections in small patches, where the climatic conditions are such that the lands will yield crops as good as the average farm lands of the Mississippi Valley. This class of development by better cultivation of the soil, in connection with the introduction by the government of foreign plants specially adapted to American arid land conditions and further joined by the great agricultural development under national irrigation will cause in the next ten years a mighty transformation in the west.

I was all run down from nervousness and overwork and had to resign my position and take a rest. I found that I was not gaining my strength and health as fast as I could wish, and as your Wine of Cardui was recommended as such a good medicine for the ills of our sex, I bought a bottle and began using it. I was satisfied with the results from the use of the first bottle, and took three more and then found I was restored to good health and strength and able to take up my work with renewed vigor. I consider it a fine tonic and excellent for worn-out, nervous condition, and am pleased to endorse it.

AGNES WESTLEY,
Secy., North Wisconsin Holland Society.

VALUES along the electric line west of town have showed a considerable advance the past month, and several changes of really are recorded, one forty-acre place changing hands this week at \$12,500. Not an acre can be purchased for less than \$100, and many tracts are held at double that figure. One forty-acre tract has changed hands four times within the past few weeks, and is now on the market at an advance. Los Angeles speculators have been in the field, offering to buy desirable tracts, but in a majority of cases their offers have been rejected. With the advent of the road and the incoming of bona-fide settlers large tracts will be subdivided and those fortunate enough to possess such holdings will be on Clover avenue.

SANTA ANA trustees have decided to defer action upon the matter of raising municipal water rates, a decided objection having manifested itself to the contemplated raising 50 per cent in rates. It is manifestly an injustice to impose upon water consumers burdens of taxation to tide the city over the present depleted condition of the city treasury. That is not the purpose of municipal ownership. The spirit of municipal ownership is to provide consumers with water at cost, and any surplus accruing to the city treasury from the service is just so much exacted from them over and above what the true schedule of rates should be. Anaheim maintains municipal water and electric light plants, and water and lights are furnished consumers at cost. This charge includes cost of operating the plants, fuel, insurance, depreciation of plants, interest and sinking fund; and no revenue is sought to be derived from them. Santa Ana's water works yield a surplus of several thousand dollars per year, and an attempt to exact further revenue from consumers is an injustice perpetrated upon them. Small wonder the consumers have raised an outcry against the imposition.

DON DAVID YORBA was in town this week from his ranch up the river. He holds to the view that the opinion of Judge Noyes in the suit of the water companies versus Ashcroft is based upon sound principles of law and equity. He says Ashcroft acquired the water rights of his father, the late Prudencio Yorba, and he considers them to be as well established as any in the State. He considers the Ashcroft right identical with those applying to the Durkee ranch, and says that in upholding the former Judge Noyes followed the decision of Judge Bledsoe in the Fuller case, wherein the rights of the Durkee ranch were established. Don David has one of the finest fields of corn in the county growing upon his ranch up the river from which he expects to harvest a record-breaking yield this season.

IRRIGATION problems that have long puzzled the orange growers of Southern California are to be solved by the experts of the agricultural department of the state university during the next few months. Prof. Fortier and Dr. Loughridge are now in Southern California to begin experiments in the orange orchards. These experiments will

be made at Riverside. A complete series of soil and water tests will be conducted to determine what becomes of the water that is applied in irrigation to the orange and lemon orchards. All over this section growers have varied in their methods of applying water to land. While all the growers apply water in furrows, there is little uniformity in the size and number of furrows used. Nearly all the growers used to apply water in small furrows, thereby saturating the surface of the orchard. Such a practice is now believed by the best farmers to result in much waste of water. Tests are to be made where small and large irrigation furrows are used, to determine which method results in the least waste of water. Prof. Le Conte of the university is co-operating with Expert Tait, formerly of Cheyenne, in making complete mechanical tests of a number of representative pumping plants in this part of the state, and by these tests it is hoped to point out to the farmers what methods of pumping are most economical and satisfactory.

SEVERAL of our representative citizens are discussing the propriety of organizing a joint stock company for the erection of a hospital. Our physicians find it necessary frequently to go out of town to secure accommodations for operative cases, and this is not as it should be. Anaheim is growing, and a well-appointed hospital is one of the crying needs of the hour.

THE abbreviation fiend has been working overtime, and his abominations multiply apace. Two of the latest monstrosities to date are "Salt" for Salt Lake and "Fe" for Santa Fe. One hears "Los" for Los Angeles oftener than the correct designation of that burg, and we rarely hear the word berry any more. The delicacies are "straws" for strawberries, and we are quite prepared to hear of "blacks," "rasps" and "dews." Land sakes, what air this world acoming to?

THE agricultural experiment station at the University of California has just been notified by Prof. A. V. Stubenrauch, who is now at Marysville supervising the wheat experiment, that an effective remedy has been discovered for the destruction of the troublesome mustard weed. There are over 300 varieties of wheat planted at Marysville by the state agricultural station with a view of discovering those varieties that are highest in gluten content. During the winter these wheat patches were infested by the mustard plant to a very troublesome extent. Efforts were made to destroy the weeds by various means, but none were effective. Prof. Stubenrauch then conceived the idea of spraying the wheat as well as the weeds with a strong solution of bluestone. It was found that where the solution had been applied while the plants were very young, the remedy was most effective. The bluestone is sprayed well down into the heart of the weed, which causes it to dry up and eventually die. This remedy for the mustard weed is so simple that great good is expected from the discovery. The mustard weed is a considerable nuisance all over the state, and an efficient remedy has long been sought by the farmer. The university will further exploit the bluestone solution spray, to discover its precise value as a weed destroyer.

THE state board of education has fixed the price of the children's primer at 25 cents and the second reader at 35 cents. These figures represent the cost at Sacramento.

A visit to Long Beach on Sunday, after an interim of a couple of years, shows the town has made wonderful progress during that time. A feature of the trip was a ride on the new Salt Lake route,

which proved quite an innovation, as railroad traveling goes in the wild and wooly west. The cars are large and airy, conductors polite, and everything on the train has a semblance of newness that is pleasing. But the evenness of the roadbed is what places the new line ahead of its rivals. The train moves along at a rapid rate without jar; one notices the difference before it pulls out of the station. At Long Beach the road has erected a handsome depot at the side of the pier, which makes it easy of access to the traveling public. The beach town shows many improvements and is making substantial progress.

Mrs. Henrietta Dato died at her residence on Emily street on Wednesday evening at 11 o'clock, from the effects of a stroke of apoplexy suffered a short time before dissolution. Two years ago she was stricken with partial paralysis. She was in feeble health and life was at times despaired of. Last week she again suffered a more severe attack of paralysis, when death came to relieve her from her pains. Burial services were held on Friday. Rev. Lusk preached an impressive sermon. Many of the friends and neighbors of the deceased were present to pay their last respects to the dead. The remains were tenderly laid to rest in the cemetery.

All the graded schools of the county except those of Anaheim, Santa Ana and Centralia closed for the summer vacation on Friday. The exceptions noted will continue for two weeks more closing June 23. The Orange high school will graduate its first class this year. The school was formed only two years ago and now has an enrollment of one hundred. The graduating class will have commencement exercises in the evening of the 23d inst., when Rev. Miller of Santa Ana will deliver the address. The baccalaureate sermon will be preached on the evening of the 18th inst. by Rev. Morris of Villa Park and class day exercises will be held on Wednesday evening, the 21st inst.

Our readers will please notice the change in the advertisement of the Brownsberger Home school of Los Angeles. A circular has come to our hands which directs special attention to the important features of this school. The home school consists of three distinct departments—the bookkeeping department, the shorthand department and the Brownsberger Preparatory. This last named department is in a separate building which has been added to the school premises and is established for the direct object of fitting young people to enter Brownsberger business college, or to make up their grades, in case they wish to return to the public or high school, or to receive a liberal English education in far less time than can be accomplished in the graded or high schools.

The bar association of Sacramento county has appointed a committee to contest the Saturday half-holiday law as applied to city and county offices, taking the position that it is unconstitutional.

Senator Clark is building a palatial mansion in New York and he has gotten ahead of the contractors and labor unions by purchasing outright six building plants. He is running these plants himself. He bought a granite quarry at North Jay, Me.; a stone finishing plant at Bangor, Me.; a marble factory at Ravenswood, L. I.; a wood-work factory at Ravenswood, L. I.; a decorative plaster plant at Ravenswood, L. I., and a bronze foundry in New York City.

Italy's New Navy
If Italy is to maintain the position she now holds as a naval power she has not much time to lose in beginning the programme which is to be spread over twelve years. Of battleships she has four that are modern and effective, one completing, two building, and one projected. Of the other vessels that fill out her naval list a number are old, and others have lost the prestige they once had. Thus the Dandolo and Dandolo, which were designed thirty years ago and greatly impressed the naval imagination of the time, are now hopelessly obsolete for modern warfare. The Italia and Lepanto, each of nearly 16,000 tons displacement, are twenty-six years old, and though their armament is powerful, their armor is so antiquated that it would be no protection whatever in battle. The battleships now building are designed for wonderful speed for their class, twenty to twenty-two knots, and Italy has half a dozen good armored cruisers. Twenty-five years ago her navy was much more formidable than ours. Today ours is vastly more formidable than hers.—Boston Transcript.

LOCAL EVENTS

B. V. Beebe was a business visitor to Los Angeles on Monday.

Herman Stern was the guest of Los Angeles friends on Sunday.

Dr. J. L. Beebe made a professional visit to Los Angeles on Monday.

Dr. A. W. Adams was a visitor in town this week from Oxnard.

Miss Julia Nemetz visited with friends in Los Angeles on Sunday.

Gus Hansen was a visitor in town on Tuesday from Orangethorpe avenue.

Wm. Schwenkert went up to Los Angeles on Monday on a business trip.

The band boys gave one of their popular open-air concerts on Saturday evening.

Don Juan de la Guerra was in town from Yorba this week, on a brief business visit.

Miss Potter of Santa Ana visited in Yorba last week, the guest of Miss Mattie Yorba.

Mrs. J. S. Hatfield spent several days this week with friends at Strawberry Valley.

Bowman Merritt has been doing relief work at the prescription desk in Hutchinson's drug store.

Misses Elsie Clabaugh, Elsie Nebelung, Clara Fischer and Dora Click visited in Los Angeles Saturday.

J. D. Heitschusen has purchased the Simmons property on the corner of Chartres and Hermine streets.

Frank Vegely, Tom McKeeyer and Ed Parker were in town from Santa Ana on Thursday evening last.

Mrs. Dr. Johnston departed on Sunday for her former home in Toronto. She will be absent until September.

Father McDevitt, who is sojourning here for the benefit of his health, was a visitor to Los Angeles on Monday.

The limiting of the saloons in this town has caused the market price of them to soar quite high, so it is said.

Rev. Father Dubbel attended the convention of the Knights of Columbus in Los Angeles several days last week.

Mr. and Mrs. Arthur E. Perris of San Bernardino visited in town Sunday the guests of Mr. and Mrs. Jos. Backs Jr.

James Forbes was in the city from Placentia on Saturday afternoon on a brief business mission.

Misses Grace and Anna Schindler, daughters of Herman Schindler, visited with friends in Los Angeles several days the past week.

Jos. M. Backs, Jr., and wife contemplate a visit to the Portland fair. They will leave next month and be absent several weeks.

Claude Eaton has sold a 10-horse power gasoline engine to A. B. Everitt who will use it for operating a pumping plant on his ranch east of Garden Grove.

Godfrey Stock and family and Mr. and Mrs. Tim Borge drove to Huntington Beach on Sunday. They found many substantial improvements under way.

Claude Eaton is negotiating for the sale of his residence on Chartres street. He contemplates the erection of another residence adjoining his present location on the east.

Dr. Harris intended to move into his new office in the Hart building several days ago, but it will be a day or two before he moves, owing to the delay in finishing the rooms.

Mrs. Max B. Fitch, who has been visiting with her mother, Mrs. Lewis, in Los Angeles, for some weeks past, has returned to her home in Socorro, N. Mex.

Mrs. Pitman, daughter of the late J. K. Tuffree of Placentia, was married at San Diego on Wednesday afternoon to Frank O'Brien of the Los Angeles police force.

Mrs. Henry Horstman of San Francisco accompanied by a party of friends were in town some days ago, guests of Miss Marie Horstman. The party came south on the Knights of Columbus excursion.

Attention is called to the announcement in this issue of J. R. Gardiner, the rustling real estate dealer of Fullerton. John has all kinds of bargains listed and intending purchasers will do well to see him before buying.

W. H. Bowen of Los Angeles was in town Monday, looking after his brother-in-law's ranch west of town. Mr. Bowen is an old time newspaper man, but has long since forsaken the profession and become a rancher and millionaire.

Parties were in town on Saturday, looking through the Deutsch block with a view to opening a dry goods

store. It was reported on the streets yesterday the new store would be opened early in July.

Mr. and Mrs. Fred H. Backs, Jr., Mrs. R. Melrose and Miss Winifred Melrose attended a theatre party in Los Angeles on Saturday evening.

Agent Clausen of Los Angeles is again riding his wheel which was temporarily held in custody of the sheriff's office as an exhibit in the case of the youth Houser who stole it, and who went up for a year for it.

Al Bittner went to Escondido some days ago, to inspect his 80 acre ranch, recently traded to him by Jake Stern for his Center street property. He found the ranch was located on Smith mountain, twenty miles out of town, with no water. He decided to return to this city.

Herman Dickel had an invitation to accompany the excursion of the Los Angeles Chamber of Commerce from that city to Salt Lake, but was compelled on account of business engagements at home, to forego the pleasure of the trip.

The school children of the sixth grade enjoyed an outing at Anaheim Landing on Saturday. They journeyed to the beach in a trolley, chaperoned by Miss Ella Rea, and went blowing tin horns to add din to their joyous laughter and shouts as they merrily rode along. A happy day was spent at the beach, the children returning home late in the afternoon.

A number of friends of Peter Weisel accompanied by the band, tendered that gentleman a surprise at his home on Los Angeles street on Saturday evening, the occasion being Mr. Weisel's homecoming from a European trip. A very pleasant evening was spent and all joined in singing De Wacht am Rhine as a finale to the evening's pleasure.

The Anaheim Mandolin club entertained their friends at a social hop at the opera house last evening. The affair was a social success and an enjoyable evening was participated in. Babize's orchestra furnished the music. The arrangements were in the hands of such society leaders as Tom Scott, Willie Wallop, Mr. Ritchie and others. Supper was served in the armory.

E. B. Merritt, secretary of the Maccabees, received on Saturday a draft in amount of \$3000 from the headquarters of the order at Port Huron, Mich., in favor of Frank H. Huch, as insurance upon the life of his deceased brother Alex Huch. The latter expired May 2. He joined the order in 1892, and had paid \$200 into the order as assessments upon his policy. Receipt of the insurance so speedily after the death of the policy holder speaks well for the Knights of the Maccabees.

John R. Gardiner of Fullerton on Friday sold the Del Campo hotel to H. C. Smith and E. W. Dean of Fullerton. The building will be razed and the material used for the erection of cottages in this city and Fullerton. The building was erected in 1887 at a cost of \$40,000. It was intended as a hotel, but was not successful, and for years has been used as a cheap lodging house. The work of taking down the edifice will begin forthwith.

Judge West on Friday in the superior court decided against W. S. Whitney of Santa Ana in his suit against that city attacking the validity of the recently issued \$30,000 electric light bonds. In his complaint Whitney maintained the city trustees exceeded their legal powers in calling the bond election, and in subsequently advertising the issue for sale. Attorneys for the city entered a general demurrer, alleging insufficient ground for action, and argument was heard before Judge West June 2. The case will be appealed.

As showing the increased consumption of water by the municipality, Engineer Lewis states that one day last week he pumped 151,000 gallons of water at the power-house, while the largest amount raised last summer was 128,000 gallons. As the summer months have just begun it is fair to assume this high-water mark will be exceeded in the near future. Mr. Lewis reports a rise of 3 feet 2 inches of water in the city wells, water standing 194 feet below the pumps. However this was lowered to 234 feet during the day's pumping last week referred to. Mr. Lewis also states that users of city water should respect more fully the rules about sprinkling, and that in case of fire all water connections should be turned off. One day recently when the fire pressure was put on to test pipe connections in a newly erected residence, he found difficulty in maintaining a pressure of 100 pounds to the square inch, while 150 pounds is necessary for adequate fire streams. Low pressure was the result of many sprinkling connections being opened. The

practice of permitting water to run all night will in future be met by heavy fines.

J. B. Rea made a trip to Los Angeles on Tuesday.

I. Asher was a business visitor in Los Angeles yesterday.

Directors of the water company went up the river yesterday to inspect the site for a large pumping plant to be installed near Horseshoe Bend.

Charles B. Slaughter, the well-known music director of this city, was married on Monday to Miss Minnie Dunseath. Friends extend felicitations.

Dr. Bickford has moved into his cottage on Philadelphia street. He leaves shortly, accompanied by his wife, for a visit to the mountains for an outing.

Secretary Krick of the water office gives notice in our advertising columns this morning that Rua 2 will begin on June 20th, and that renters of stock must file their applications by that time or they will have a dry time of it.

Mr. Dutton is putting the finishing touches on the assessment roll, it being necessary to have his report complete by July 1st. He is of opinion the total assessment of the county will show a substantial increase, notwithstanding the exemption made relative to personal property taxes under \$100. This increase comes from the large amount of building during the past year.

Mme. Modjeska, appeared on Tuesday evening at the home of Mr. and Mrs. James S. Rice at Tustin in a social function, given by the Ladies' Guild of the Church of the Messiah, rendering some interpretative recitations, which she has never before presented in public. Mme. Modjeska and Count Bozenta are spending most of their time at their mountain home, Arden, in Santiago Canyon, making frequent trips to outlying points as guests of friends.

Contractor Graham has been in town from Los Angeles during the week and will make this city his headquarters during construction of the Odd Fellows' block. Mr. Graham on Monday started a force of seven bricklayers upon the building, the cement foundations having been put in last week. Several carloads of brick and lumber have arrived and much of it has been hauled upon the ground. A large force of carpenters will be put to work next week and the building rushed to completion within 90 days. Foreman Froehlich states he will have the brick walls all up in fourteen working days.

The frame building now occupied by Jeweler Hoople, and which has been the subject of some discussion during the past week relative to its removal, was erected by Tim Boege in 1867 at a cost of \$2500. It was used by Mr. Boege as a residence for a number of years. The brick meat market, which was torn down in order to make room for the new Odd Fellows' building, was erected by Mr. Boege in 1869. The livery barn to the west was also erected by Mr. Boege and for years occupied by him as a blacksmith shop. It was later occupied by Wm. Crowther as a blacksmith shop. From profits made here Mr. Crowther purchased his 100 acre tract at Placentia, now occupied by one of the finest walnut orchards in Southern California.

Herman Kruger was in the city from Centralia on Saturday. He states the advent of the electric railway in that section has served to give a decided advance to property values, and cites the case of one forty-acre tract which has charged hands four times recently, each time at an advance. Another forty-acre tract was sold this week for \$12,500. The line runs within a few feet of Mr. Kruger's property and a station will be established near his corner. Mr. Kruger has had a number of flattering offers for his property, but has wisely declined to sell with excellent prospects for a rising market. He derives no inconsiderable revenue from a large number of chickens, gathering several dozens eggs daily.

Dr. D. W. Head of Garden Grove, father of District Attorney Head, is said to be out of the state to escape summons by the Pacific Electric railway company for condemnation of right of way through his property. Head owns a valuable ranch at the Grove and this the survey for the electric road traverses diagonally. More over the line cuts directly through his residence, which will have to be moved. Head asks for \$2000 damages. The railway people at first offered \$1000, and subsequently raised the amount to \$1200. Officers of the court have been looking for him for a fortnight, but have been unable to serve him with the papers in the case. It is said that once or twice they came upon him but not knowing him he was permitted to go on his way rejoicing. It is reported Head has gone to Texas on a paeasr.

Another street fakir held full sway on the street Saturday night, selling his wares at prices that made one think he may have had a brother stealing for him, so low were the goods offered. What's the matter with the city dads protecting the home merchant by passing an ordinance keeping out these curbstome vendors.

The Woodmen of the World and Women of Woodcraft will give an entertainment and dance at Music Hall on Wednesday evening, June 21st. There will be a wood sawing contest between the Santa Ana team and a team from this city. The former team has always won in the past, but the home team intends to turn the tables this time. A nail driving contest for ladies will also be held. Handsome prizes for winners in both contests. Light refreshments will be served and a dance follows.

Mr. Armstrong has the thanks of the editorial household for a tender and juicy fowl from his farm, which was discussed with much relish a day or two ago. Mr. Armstrong feeds his chickens after an approved method which seems to place tender meat upon them instead of the tough and strong fibre characteristic of some birds offered for sale in the poultry stalls, and which probably came over in the ark. The one in question proves the success of his method. A finer bird was never placed before a king, nor an editor.

C. C. Chapman purchased the interest of President McEndree in the State Bank at Fullerton and has been elected president of the institution. Cashier Percival also sold his stock in the bank and has gone east. Mr. McEndree and family will move to Los Angeles. E. K. Benchley, who also purchased stock in this bank, and C. C. Chapman were elected directors, succeeding McEndree and Percival. F. H. Souders of the Commercial national bank of Los Angeles will act as cashier for one month, when Arthur Staley will assume the duties of cashier.

Charles Houser, the youth who stole Agent Clausen's bicycle from in front of Baum's barber shop a fortnight since, was on Friday sentenced by Judge West to one year's imprisonment at San Quentin. Houser has lived in Orange county for a year past and is aged 19. He rode the wheel to Los Alamitos, where he sold it to Constable Powell for \$5. The latter, surmising it was stolen, made investigations, and the following day placed Houser under arrest in Los Angeles as the young fellow was about to board a train for the north. Houser plead guilty, and asked for the mercy of the court.

Articles of incorporation were filed Thursday for the Huntington Beach Times Publishing company with the following directors: W. T. Neland and O. H. Huber of Huntington Beach, S. H. Finley of Santa Ana, H. S. Hazeltine of Smeltzer and E. W. Hoag of Long Beach. The capital stock is \$25,000 of which \$17,850 is subscribed in equal shares by five directors. The company has purchased the plant of the Huntington Beach News and will issue a paper to be known as the Huntington Beach Times. E. W. Hoag will have charge of the plant.

Fritz Ruhman has disposed of his saloon to J. D. Heitschusen of Olive, who will take charge of the business July 1st. Mr. Ruhman has conducted a saloon here for 28 years, 14 years to a day in his present location when he sold to Mr. Heitschusen, and a similar length of time in a former location. He has amassed a considerable fortune, and retires at 70 years of age to take life easy under his own vine and fig tree. He is held in high esteem by all who know him, being one of the community's most respected citizens. Mr. Heitschusen will be associated with Adam Walter, who will conduct the business for him. The consideration is stated to be \$3500.

One of the most enjoyable social hops of the season was given in the dancing pavilion at the home place of Mr. and Mrs. de la Guerra at Yorba on Wednesday evening. The host and hostess were assisted in receiving by Miss Mattie Yorba. Their proverbial hospitality was extended all and a very pleasant dancing party was participated in. Excellent music was furnished for the dance and all the numbers were enjoyed immeasurably. Refreshments were served and at a late hour the dancers dispersed.

Among those present were Mr. and Mrs. de la Guerra, Miss Mattie Yorba, Miss U. Yorba, Miss E. Brown, Misses Rimpau, Miss G. Brown, Miss Dominguez, Miss P. Nemetz, Miss Nebelung, Miss J. Bowen, Miss D. Dominguez, Mr. and Mrs. J. F. Valasco, Miss L. Potter, J. Encinas, H. Skinner, E. W. Ruiz, Happy Hooligan, Poor Lil' Joe, E. Bayha, J. C. Lugo, F. Burrello, P. Nicolas, R. Holley, Bobbie Rimpau, J. Montgomery, J. Selinger, E. Yorba, H. Hughes, Jake Berlin, Homer G. Ames, A. Yorba, I. F. Yorba, A. Dominguez, M. Skinner.

W. H. Spake visited yesterday in Los Angeles.

Dr. Harris will move, into his elegant new offices in the Hart block the first of the week.

Dr. Johnston read a paper on appendicitis before the Orange County Medical society at Santa Ana, last Tuesday evening.

The S. P. tracks on this end of the division have been oiled and the man behind the throttle has been having a hard time "pulling out" of stations.

Peter Weisel returned this week from his trip to Europe. Mr. Weisel was absent several months. He returns in the best of health and reports a very enjoyable trip.

W. J. Hill expects to start threshing operations next week. He looks for a very favorable season, especially in the La Habra valley, where the yield promises to be large.

Mr. Simmons has sold his residence property, corner Chartres and Hermine streets, to Mr. Heitschusen, who will occupy it with his family. The purchase price is said to be \$3700.

John Selinger on Monday received his commission as second lieutenant of Co. E, to which position he had been recently elected. Johnny feels proud of his exalted station and makes a model officer.

Miss Annie Everhardy, who has been ill with typhoid fever for several months past, has recovered her health. Miss Everhardy was visiting friends in Kansas when she hastened home on account of illness, which developed into a bad attack of typhoid fever.

The Anaheim brass band will give a picnic in Santiago canyon on Sunday, June 25. There will be dancing in the pavilion and a good time generally. All the band boys are fine young men and are rated among the best of entertainers. A pleasant outing is anticipated.

Henry Kroeger has been indisposed for some days past, as a result of a kick from a horse which he was feeding. Mr. Kroeger is aged 76, and is one of the oldest residents of this city. Yesterday his condition was improved and he will probably soon be able to be about again.

Some miscreant broke off a number of the young cypress trees in front of Mrs. Langenberger's property on Lemon street, Tuesday evening. The mischief was done out of pure wantonness, and the guilty party will be severely punished if apprehended.

At the First Presbyterian church of Fullerton yesterday, at high noon, Harry P. Moffit and Miss Ethel Lovring were married. Rev. J. M. Hopkins officiating. The ceremony was witnessed by a large number of friends and relatives. Mr. and Mrs. Moffit will make their home in Indiana.

H. A. McWilliams is lying critically ill with brain fever at his residence on Broadway. Sincere regret is felt throughout the community at the physical ills which have overtaken this estimable citizen. It is the prayer of his many friends that he may be permitted to speedily recover and be long spared for his life of usefulness in this community.

After celebration of mass at St. Boniface church on Sunday, the congregation repaired to the old church, where the St. Boniface society was reorganized. Jacob Everhardy was elected president, C. F. Grims, secretary and Ben Dausser, treasurer. The object of the society is to provide for liquidating the debt upon the new church building, as well as for making necessary improvements, construction of sidewalks, etc. Members of the congregation resolved to establish a branch of the Knights of Columbus, and final action was deferred, pending receipt of further information upon the subject.

The Anaheim band on Monday evening elected the following officers: Herman Schindler, president; John Weaver, vice president; Frank Tusch, secretary; Chas. Pressel, treasurer. The band will give an open air concert down town next Saturday evening, and on Sunday, the 25th, will have a picnic and promenade concert at the County park in Santiago canyon. A cordial invitation is extended the public to participate. There will be dancing for young folks and athletic games and amusement for all during the entire day. The band has made great improvement of late and is now one of the finest musical organizations in Southern California. Its picnic promises to be one of the events of the season.

The Y. P. S. C. E. of the Presbyterian church will give a dime social this Thursday evening, June 15, at the home of Mrs. Grimschaw. All are invited to attend.

Quit using canned milk and try fresh bottled milk from the Model Dairy at 5c. per qt.

Does this look good to you?

Griffith Lumber Co.
HENRY M. ADAMS, MANAGER

European Nut Situation
Advices by mail and cable from southern European markets predict short crops of fruit and nuts as the result of prolonged drouth. The effect of this is most pronounced in the primary market for 1904 Sicily filberts, which according to some reports are advancing at a very rapid rate. The upward movement is assisted by some speculative activity and the fact that the available stock is small. A cable from Messina quoted June shipment at a price equal to 81c laid down here. In this market there has been no quotable improvement in prices, quotations showing the wide range of 81 and 9c, as to holder and quantity. At the inside price, however, sellers are willing to release small lots only. Walnuts of 1904 crop are said to be closely cleaned up in Southern France. Last prices from there were above a parity with quotations in this market.

NOW IS THE TIME FOR HYOMEI

Far Easier to Cure Catarrh Now Than at Any Other Season

Now is the time to use Hyomei, when the early summer days make it so easy to cure catarrhal troubles. The Hyomei treatment, breathed for a few minutes three or four times a day in May or June, will do good twice as quickly as it did in January, and nearly everyone knows that used faithfully then, it completely rids the system of catarrh. The complete Hyomei outfit costs but one dollar, and consists of a neat inhaler that can be carried in the purse or vest-pocket and will last a lifetime, a medicine dropper, and a bottle of Hyomei. Extra bottles of Hyomei can be procured, if desired, for fifty cents.

W. B. Hutchinson gives his personal guarantee with every Hyomei outfit he sells to refund the money if it does not give satisfaction. There is no risk whatever to the purchaser of Hyomei.

Fast-Growing Walnut

Luther Burbank, by crossing different varieties of walnut, has produced a tree which makes the fastest growth of any tree known. He regards this achievement as of immense importance commercially, for it will vastly extend the use of the walnut in the manufacture of furniture and even permit of its use as a wood for stove or grate fires. His success was attained by crossing common English and native black California walnut, and also crossing two varieties of native black California walnuts. At present walnut wood for manufacturing purposes costs \$250 to \$500 per 1000 feet. When new varieties are grown in sufficient quantities the price will be greatly reduced.

DYING OF FAMINE
is, in its torments, like dying of consumption. The progress of consumption, from the beginning to the very end, is a long torture, both to victim and friends. "When I had consumption in its first stage," writes Wm. Myers, of Carroll, Md., "after trying different medicines and a good doctor, in vain, I at last took Dr. King's New Discovery, which quickly and perfectly cured me." Prompt relief and sure cure for coughs, colds, sore throat, bronchitis, etc. Positively prevents pneumonia. Guaranteed at W. B. Hutchinson's drug store, price 50c and \$1.00 a bottle. Trial bottle free.

The meaning of the evil eye, the "ophthalmos baskanos" of the Greeks, the "fascinare" of the Romans, was probably far more than a vulgar superstition. We find traces of it in almost every country, notably to this day among the canny Scots who inhabit the western isles of the sea, of "Ulla dark and Colonsay," of Skye and the Hebrides, and among the Turks, who distrust the evil eye of the stranger. But in old classical days the power seems chiefly to have been used for the purpose of procuring affliction to the live stock of disagreeable neighbors. So we find to this day in Ireland, parts of Scotland and the west of England where this belief is still prevalent. Certainly, in some form or other, mesmeric fascination by the eye has always been known. But that any one person, with no matter how evil an eye, should be able to charm frightened animals to any extent or number is ridiculous and not seriously to be entertained for one moment.—Chambers' Journal.

Why a "Limited" Train?

The question why a "limited train" so called has been propounded to a general passenger agent, who replies as follows:

First.—It is limited as to its time.

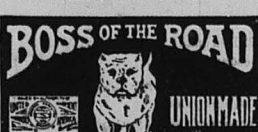

Second.—It is limited as to the number of cars and weight of train.

Third.—It is limited as to the class of cars.

Fourth.—It is limited as to the number and class of passengers permitted transportation thereon.

This last limit is adopted so that every passenger may have ample accommodation and not be crowded or interfered with by other passengers. The fact that an additional fare is charged on a limited train and, further, that nothing but first class tickets are accepted for passage tends to limit the class of travel which is carried.

Notice of Guardian's Sale of Real Estate

Notice is hereby given that in pursuance of an order of the Superior Court of the County of Orange, State of California, made on the seventh day of April A. D. 1905, in the matter of the estates and guardianship of Frank Pratt, Elinor Pratt and Wilhelmina Pratt, minors, the undersigned, the guardian of the estates of Frank Pratt, Elinor Pratt and Wilhelmina Pratt, minors, will sell at private sale to the highest bidder, for cash and gold coin of the United States of America, and subject to confirmation by the said Superior Court, on or after Tuesday, the 20th day of June A. D. 1905, all the right, title, interest or estate of Frank Pratt, Elinor Pratt and Wilhelmina Pratt, minors, in and to that certain lot, piece or parcel of land situate, lying and being in the County of Orange, State of California, bounded and described as follows: An undivided three-fourteenths of a part of the northeast quarter of section number eleven in Township Four South, Range Ten West, S. B. M., beginning at a point in the south of the northeast corner of said northeast quarter; thence south forty rods to a point; thence west forty rods to a point; thence north forty rods to the center line of Broadway street; thence east forty rods to the place of beginning, containing ten acres of land and being in said County of Orange, State of California.

Bids will be received for the whole of the above described parcel of land, and such bid will be treated as pro rata bid for the several interests upon the confirmation of the guardian's sale of the interests of said minors, the owners of the other eleven-fourteenths of said premises will convey their undivided interests to the purchaser of said minor's interest; each of said minors owns an undivided one-fourteenth of said described land.

A certificate of title will be furnished to the purchaser, showing title to said premises to be good and free from all incumbrances except taxes for the current year. Terms and Conditions of Sale—Cash in gold coin of the United States. Bids and offers may be made at any time after the first publication of this notice, and before making of the sale. All bids must be accompanied by a certified check for ten per cent of the amount of bid, payable to the guardian of said minors. Bids and offers must be in writing and left at the residence of Mary Louise Pratt, in the City of Anaheim, Orange County, California, or delivered to said guardian personally, or may be filed in the office of the Clerk of said Superior Court of Orange County.

MARY LOUISE PRATT, Guardian of the Estates of Frank Pratt, Elinor Pratt and Wilhelmina Pratt.
H. W. Chynoweth, Attorney for the Estate.

HUTCHINSON'S DRUG STORE

ANAHEIM, CAL.

Now is the time to look into the merits of our

Syrup White Pine

FOR COUGHS AND COLDS

NORTH AMERICA.

Originally Mapped as an Extension of India and China.

"Uneducated Americans," says a correspondent of the London Times, "pronounce the name of their country America, calling themselves Americans. In so doing they not only yield to a natural craving for a finer eulogy, but, quite accidentally, I presume, are more correct etymologically than educated Americans, Amerigo being the Italian form of the Gothic Amalaric, contracted to Amarie. This personal name means 'strenuous in labor, resolute in action,' an appropriate motto to add to the Washington memorial in the national device of 'America.'"

"Brazil was the original America. Down to the first quarter of the sixteenth century our North America was still mapped as an extension of India. Tibet, China and Japan, with Brazil as an island, separated by the islands discovered by Columbus from the 'new world of Greater India' and named 'America provincia' and again 'America vel Brasilia.'"

"Not before the middle of the sixteenth century was the term 'America' extended to North America, with the addition 'vel Nova India.' In brief, the Americas were both mere windfalls in the heroic secular quest after 'spiced' India. This is the redoubled debt the Anglo-Saxon race owes India."

A BAD SCARE

Some day you will get a bad scare, when you feel a pain in your bowels, and fear appendicitis. Safety lies in Dr. King's New Life Pills, a cure sure, for all bowel and stomach diseases, such as headache, biliousness, costiveness, etc. Guaranteed at Hutchinson's drug store, only 25c. Try them.

Striped Suit: Lively Walk.

Once in my cullow days I accepted a wager that I could wear a prison suit and walk from Buffalo to Cleveland without serious molestation. It took me over four days to get thirty miles. I was arrested nine times, and at Dunkirk I came near being mobbed by a Sunday school picnic and was compelled to discard my uniform for citizen's clothes. Yet I was a free man and innocent of crime, and there was no law defining what I should wear so long as it was male attire.—Elbert Hubbard in *Phyllis*.

How's This?

We offer One Hundred Dollars Reward for any case of catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O. We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by him.

WALDO, KIRKMAN & MAYBIN, Wholesale Druggists, Toledo, O. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c per bottle. Sold by all Druggists. Take Hall's Family Pills for constipation.

Should He Never, Ladies, Oppose the Wishes of His Wife?

Is the kind husband a failure?

That depends. A husband can scarcely show his wife too much kindness. But sometimes real kindness may be shown in opposing her wishes. If the husband has any mind of his own he must use it. He need not be mean in his opposition nor arrogant nor tyrannical. He should be reasonable at all times and disposed to highly regard the expressed wishes of his wife even though these wishes may seem to him to be whimsical or capricious. But—

Kindness does not require subservience or entire and instant surrender of opinion. Indeed, it is easy to see how such surrender might lead a wife to despise her husband. He who fetches and carries like a poodle is likely to be considered a poodle.

Women admire strength in a man. This strength need not necessarily be physical, though that is desirable. Women love strength of character in a man. And—

Is it not so, ladies? When a woman coaxes a strong man to her point of view by strenuous endeavor, does she not regard it as merit to have influenced this big, strong being? If she gains her own way at once and at all times she has achieved nothing, and there is no rejoicing in her heart.

Certainly a man should be kind to his wife—always kind. But he need not be an automaton or an echo or a plaything.

Is it not so, ladies?—Albany Times-Union.

The Paint You Know is Best

TODAY—every progressive painter—everybody who understands paint—knows that an absolutely pure lead-zinc-linseed oil paint is the best paint—far better than pure lead and oil because lead and oil paint will always "chalk off" in a short time.

Rub your hand over a surface painted with lead and oil—see the powder of loosened lead on your hand—the paint is no longer protecting the house, but being blown away and washed off by the rain.

"Chalking" is the principal objection to pure lead and oil paint.

The zinc, combined with lead in

Horseshoe Brand Prepared Paint

corrects the faults of lead because zinc is naturally very tough and so it makes a tougher and doubly durable surface that can't "chalk off" and lose its silky lustre.

Zinc carries 60 per cent more oil than lead and that's why Horseshoe Brand Prepared Paint spreads more than a third farther—and it costs less per gallon in the first place—it costs over a third less on the building.

Now, oil is the life of paint and zinc is the backbone that holds up the oil and protects it—and that's why Horseshoe Brand Prepared Paint gives double the wear.

Because the great majority of ready-mixed paints are "doped" with cheap and harmful adulterants, which retard their spreading capacity and ruin their wearing quality, you have never been sure of getting absolutely pure lead-zinc-linseed oil paint.

But you can be sure now—because every can of Horseshoe Brand Prepared Paint bears a Chemist's Certificate of Absolute Purity.

You get the proof before you get the paint. That makes you safe—makes you sure of the best quality and the best results.

Horseshoe Brand Prepared Paint is the only Certified Paint—so it's the one paint you know is the best.

ELECTION NOTICE. SPECIAL SCHOOL TAX

Notice is hereby given to the qualified electors of Loara School District, county of Orange, State of California, that an election will be held on the 30th day of June, A. D. 1903, at which will be submitted the question of voting a tax to maintain the school in said district.

It will be necessary to raise for this purpose the sum of \$300.

The polls will be open at the schoolhouse, from one o'clock p. m. until five o'clock p. m. The officers appointed to conduct the election are: C. W. Martin, Inspector; John Henry, Judge; Arch Henry, Judge.

L. A. EVANS, P. H. WESSLER, J. W. DUCKWORTH, School Trustees Loara School District.

jl-td

Top and Bottom.

"My friend," said the long haired passenger to the young man in the seat opposite, "to what end has your life work been directed?"

"To both ends," was the reply. "I have the only first class hat and shoe store in the village."

They Were Playing Together.

He (referring to music)—Don't you think I'm slow and a little too soft? She (absently)—Yes. But, then, you have wealth and position, and that counts for something.

Receiving a new truth is adding new sense.—Liebig.

HUGE TASK

It was a huge task to undertake the cure of such a bad case of kidney disease as that of C. F. Collier, of Cherokee, Ia., but Electric Bitters did it. He writes: "My kidneys were so far gone, I could not sit on a chair without a cushion; and I suffered from dreadful backache, headache and depression. In Electric Bitters, however, I found a cure, and by them was restored to perfect health. I recommend this great tonic medicine to all with weak kidneys, liver or stomach." Guaranteed by W. B. Hutchinson, druggist; price 50c.

The Acrobatic Gibbon.

A great ape which makes its home in Borneo is the gibbon, which is a small animal compared with the orang, weighing only about forty or fifty pounds. It is very frail in its bodily makeup. The head is set squarely on the shoulders, and it looks upward. When walking on the ground it balances itself along like a walker on a tight rope. Its remarkable power of grasp and dexterity in using its hands are equally with the shape of its cranium indexes of its superior intelligence, perhaps because it is able to take hold of a greater number of things and examine them. The gibbons go in droves, whereas orangs live by families, and one of the most interesting spectacles imaginable is to see a troop of them crossing a great gap in the forest by throwing themselves in succession through the air, each one taking a swing or two to gather momentum before launching himself. So great is their agility that in executing feats of this sort they seem like birds.

A Cordial Welcome.

The first demand that the association in charge of New York foundlings had to meet was for a baby girl between one and two years of age with blue eyes, curly hair, dimple in chin, etc. A number of hospitals and asylums were canvassed, and finally Randall's Island produced a sole survivor eight months old who had a number of the requisite traits. The candidate was visited and pronounced worthy, the home up the river found to be all that could be desired, and on a stated afternoon the agent took the train with her charge. As she alighted at the station she noticed an unusual gathering of people, which was promptly explained by a shout: "There she is! There is Mrs. Blank's baby!" The entire village had gathered to offer a welcome.—Everybody's Magazine.

When Leather Was Money.

Leather was very early used as a currency, the Romans employing it for this purpose before either gold, silver or brass came into common use. History is full of references showing that leather was used by the ancients as a sort of circulating medium of exchange. It is said on good authority that so late as during the reign of Louis XII. of France the country became so impoverished and as a consequence money was so scarce that little pieces of leather with a small silver nail driven through each were in general use as money. Some few specimens of this leather money are still in existence, but are only to be found in the possession of numismatists, by whom they are highly prized.

Cultivate Your Wife's Friendship.

If a man has a good wife he has the best friend it is possible to have. "A man's best friend," says Bulwer Lytton, "is a wife of good sense and good heart, whom he loves and who loves him. In woman there are at once a subtle delicacy of tact and a plain soundness of judgment which are rarely combined to an equal degree in a man. A woman, if she be really your friend, will have a sensitive regard for your character, honor and repute. She will seldom counsel you to do a shabby thing, for a woman always desires to be proud of you. At the same time her constitutional timidity makes her more cautious than your male friend. She therefore seldom counsels you to do an imprudent deed."

How It Happened.

An English lawyer was cross examining the plaintiff in a breach of promise case. "Was the defendant's air when he promised to marry you perfectly serious or one of jocularity?" he inquired. "If you please, sir," was the reply, "it was all ruffled with 'im-a-run-in' 'is 'ands through it'."

An Easy Problem.

A man wanted a ticket to Olathe and had only a two dollar bill. It required \$3 to get the ticket. He took the two dollar bill to a pawnshop and pawned it for \$1.50. On his way back to the station he met a friend, to whom he sold the pawn ticket for \$1.50. That gave him \$3. Now, who's out that dollar?—Kansas City Star.

Try.

Try to be something in this world, and you will be something. Aim at excellence, and excellence will be attained. This is the greatest secret of success and eminence. "I cannot do it" never accomplished anything. "I will try" has wrought wonders.

Men's Vanity.

There is no exaggerated and barefaced compliment a man will not swallow greedily if it be served up by a woman. And his complacency under the process of swallowing is something delicious to witness.—Lady's Realm.

Deference of American Girls.

A generally ignored point in assessing the many reasons why American girls are so popular is the very captivating shade of deference with which they treat those older than themselves.—

To Ambitious Young People

If you are of an independent and money-earning turn of mind you will be interested in the following:

One year's training in the Woodbury Business College costs \$100; six months, \$55. The education thus acquired will enable you to earn from \$50 to \$100 a month. Taking an average of \$60 a month, or \$720 a year, in three years you will be \$2,160 ahead of your companion who has spent his four years in high school.

The Woodbury gives two main courses of study:

1 **Bookkeeping and Business Course.** 2 **Shorthand and Typewriting Course**

Either course will fit you for a good position. The two will fit you for a better one. It takes about six months to complete one course from nine months to a year to complete both.

This school has unequalled prestige and success in placing graduates. We shall be pleased to have you call at the college to see us. It is our business to help young people to be successful. Illustrated catalogue on request.

Trade Conditions

R. G. Dun & Co.'s Monthly Review For May in Southern California

Generally speaking, crop prospects for orchardists and farmers of Southern California were never better. All grain is ripening rapidly. Barley has made a heavy head and harvesting is in full swing. On the Newport ranches about 250,000 sacks of barley and

110,000 sacks of wheat will be harvested. Barley output of the Imperial Valley is close to 500,000 sacks. New barley is offered in market at 1.12 1/2 to 1.15. No quotations on new wheat are expected before July first.

New hay crop is large, quality good as old is about exhausted, is beginning to be a factor in market. \$10 to \$12 a ton is asked for first class grain hay.

225 carloads of cabbages have gone forward. Output of melons will be double that of last year, 600 to 700 carloads. Sugar beets are doing well, acreage exceeding that of any previous year. Slicing will begin middle of July. Olives are blooming heavily, but walnut trees are backward. Oranges are setting full but a fair estimate of the crop can be made not earlier than August first. Fig crop will be unusually large.

Conditions have been most favorable for bean growing. A larger acreage was prepared for them than at any time in the past. Bean market is in unusually good shape. Limas, firm at 5 1/2 and 6. Pinks are steady. Fancy are scarce. Arizona has taken seconds in big lots. The stocks are low. The demand last year from May to September was 85,000 sacks. With an equal demand this year, a shortage of 10,000 sacks must be faced.

The orange season is winding up well. High grade fruit in good condition commands high prices. Steady shipments have, the past two months, cleaned up sweets and navels that had been held back for better prices. Bloods are practically out of the way. St. Michaels are bringing good prices. About 1200 carloads of Valencia are yet to be shipped. Results this year have been on the whole, satisfactory to the grower. Price average has been better than for three years.

Lemons are going out freely. Prices about half what they were this time last year. Demand seems to have speculative interest.

Deciduous fruit crop seems still an uncertain quantity. Reports from many sections point to an apricot yield much below normal. However, Northern California crop is very large. In peaches, canning varieties, light yield; drying varieties about double that of last year. State crop of prunes will be about half of full output.

Cured fruit market very quiet. Drying will begin about June 15th and shipping probably July 1st.

Trading in futures is as yet light. Less business at this time in futures than for past five years. Some apricots reported sold at 6 1/2, choice Royale, July shipments. Not likely any business will be confirmed below 6c. Sellers are not ready to meet Eastern offers of 5c for choice peaches and in prunes, offers of 2 1/2 and 2 3/4 for Santa Clara and outside, are being turned down.

Raisin market is quiet. It is early to predict the coming yield, but growers generally say there will be light crops of Sultanas and Thompson Seedless. It is estimated about 5000 tons of last year's output are still in Southern California in hands of growers and packers. They are considered good speculation for Fall trade at 3c.

New crop honey is coming in to market. Quality is good. Crop will not be as large as anticipated. Output probably about that of 1903. Locally, general trade is exceedingly good. Jobbers are making good shipments to towns in new Salt Lake R. R. territory. Southern Nevada is natural market for Southern California products.

Real Estate continues active and a steady increase in number, and value of building permits is recorded. The million dollar mark was passed in lumber receipts at Port of San Pedro for month of May.

Failures for the month, 19. Liabilities, \$40,000. Assets, \$20,000. Against 13 for May, 1904, with liabilities of \$50,000 and assets of \$19,000.

NO SECRET ABOUT IT

It is no secret, that for cuts, burns, ulcers, fever sores, sore eyes, boils, etc., nothing is so effective as Bucklen's Arnica Salve. "It didn't take long to cure a bad sore I had, and it is all O. K. for sore eyes," writes D. L. Gregory of Hope, Texas. 25c at Hutchinson's drug store.

Now is the time for berries and you must have cream to eat with them. Try the fresh separated cream from the milk wagon at 25c. per qt. Model Dairy.

WANTED—Competent and reliable party to look after exhibit room of Chamber of Commerce, etc. For information apply to ED. MICHOD, Secretary. 78-25

FOR SALE—One 25 H. P. gasoline engine, in good repair; also one No. 6 Byron Jackson centrifugal pump, with 50 to 100 feet of 1 1/2 in. shafting, pulleys, boxing, couplings, discharge and suction pipes—a practically complete pumping plant. San Bernardino City Water Department. By A. G. KENDALL, President Board of Water Commission. 78-14

Taken a Big Tumble

After June 15 we will deliver Milk twice a day for 5c. per qt. We aerate our milk before bottling, therefore it will keep at least 6 hours longer than milk that is not, so you can easily use the morning milk for dinner and supper and the evening milk for breakfast.

Fresh separated cream 25c. per qt.

Ross Bros. Dairy

Mrs. Asher was awarded first lady's prize, Mrs. Hutchison second, and Miss Anna Arnold consolation. Gus McCauley won first gentleman's prize, I. Asher second, and Mr. Falkenstein consolation.

NAPOLÉON'S RETREAT.

That Fateful and Fatal Journey Back From Moscow.

The main facts of the French retreat from the ruins of the great Russian city of Moscow are as follows: Napoleon had entered Russia June 24. He found the country through which his route lay devastated and abandoned as he advanced, with no enemy to make a stand against him. He had to leave large bodies of troops along his line of march and to detach forces to threaten St. Petersburg and other cities. At the battle of Borodino, Sept. 7, one of the bloodiest in history, the losses probably aggregated 40,000 on each side. The loss to Napoleon, who could get no re-enforcements, was fatal.

But still he pressed on and entered Moscow, Sept. 14, to find himself robbed of the fruits of his victory by the terrible conflagration which broke out two days later. Yet Napoleon lingered in Moscow until Oct. 19. Then he marched southward to Kaluga, hoping to make his way through a rich and unexhausted country. But he was forced to follow the path he had blazed on the way to Moscow. At first the weather was fine and only moderately severe. Then came rain, snow and cold. The winter set in earlier than usual. Swarms of Cossacks surrounded the Frenchmen, harassing them at every chance. The invaders, worn out, were thrown into disorder.

The remainder of the retreat of Napoleon's army has no parallel in history for the various sufferings and horrors undergone. In November, by the time he had reached the Berezina, his army had dwindled to 12,000 men. In the retreat from Moscow, alone 50,000 had been lost. In the whole campaign some historians have estimated that 125,000 had been slain, 132,000 died of fatigue and hunger and cold and 193,000 were made prisoners. Napoleon was now re-enforced by 18,000 men, and he made his way across the Berezina, thus escaping total ruin and captivity.

It was a miserable throng which, on the evening of Dec. 6, like a crowd of beggars tottered into Vilna, the old capital of Lithuania. In all nearly 500,000 soldiers had perished from cold and bullets and hardships or had disappeared.

Malleability of Gold.

The malleability of gold is so great that a single grain may be divided into 2,060,000 parts and a cubic inch into 9,523,809,523 parts, each of which may be distinctly seen by the naked eye. A grain and a half of gold may be beaten into leaves of one inch square, which, if intersected by parallel lines drawn at right angles to each other and distance only the one-hundredth part of an inch, will produce 25,000,000 little squares, each of which may be distinctly seen without the aid of a glass.
